Acknowledgments

The annual Edition of the *Physician Characteristics and Distribution* publication is the result of combined efforts and participation of a number of staff within the Association who contributed significantly to the success of this volume. In particular, special appreciation is extended to Karen H. Andrews for her support of this publication and especially for the overall commitment and activities required to manage the AMA Physician Masterfile which is the source for the data appearing in this Edition.

Especially acknowledged is the overall expertise provided by Barry Litwin in the Department of Marketing Management and Development in implementing the marketing plan for the publication. Sincere thanks are extended to Rhonda Taira, Herbert Hinkelman, and staff in the Department of Marketing Services in preparing the monograph for publication and making the arrangements for printing of this new Edition.

The technical support provided by Nick Grahovek in the Department of Systems and Programming is sincerely appreciated, specifically for the special processing and final editing phases needed to create the Annual 1993 Historical AMA Physician Masterfile. Staff in the Department of Computer Operations also provided technical operations support.

A very special note of recognition is extended to Kristine Ellison for her skill in the complex coding for electronic typesetting of text portions of the volume and formatting the appendices and insert tables on diskette for use in preparing camera-ready copy. Her attention to detail and high level of quality work are significant contributions to the publication. Sincere appreciation is extended to Patricia Scheibel for her careful compilation and perseverance in verifying the accuracy of the trend and summary tabulations as well as proofing the text and tabulations. Special thanks to Mary Kish for assistance in proofing during the production cycle. Thanks are also extended to Rhonda Bailey, Josephine Baker, Kaveeta Burres, Vicky Carlson, Marybeth Fedele, Myra Klowatyj, Nadine Siewnarine, and Gwen Solma, for their efforts in maintaining the ongoing work activities of the Department during the preparation of this Edition for printing.

The annual publication of the *Physician Characteristics and Distribution* is made possible by the support, commitment, and dedicated efforts of the Departments within the Division of Survey and Data Resources that manage ongoing data collection activities of physician-related information, and the planning, survey, and dissemination activities for the AMA Physician Masterfile and other supplementary data files. These include the Departments of: Data Collection, Data Survey and Planning, Quality Control, and Data Services.

Foreword

As in previous Editions of this volume published since 1963, the 1994 Edition of the *Physician Characteristics and Distribution* publication presents extensive statistical information on all physicians located in the United States and Possessions. The growth in physician supply and the focus on primary care physicians coupled with the emphasis on health systems reform have contributed to the rapidly changing health care environment. To provide necessary statistical data about physician supply, this Edition presents a series of summary and detailed tabulations on the professional characteristics of physicians which can be used as a basis of comparison essential for health manpower planning, policy development, and research studies. In addition, the tabulations in this volume serve as guides for comparing regions and divisions, states, counties, and metropolitan areas with respect to the distribution of physicians by their specialty practice and major professional activity.

New, in this Edition, is a separate section which focuses on the Primary Care Specialties in which physicians practice. Included are detailed tabulations on the professional characteristics for the two categories of General Primary Care Specialties and the Primary Care Subspecialties. Trend data on Primary Care are also included for years of 1970 through 1993.

The 1994 Edition includes a section on physician/population ratios for the nation, state of location, and specialty of practice. Also presented are comparative data on the activity, specialty, and location of physicians from 1970 through 1993, along with information on the school and year of graduation, specialty board certification, and age and sex. The monograph contains summary and detailed tabulations in three separate sections of physician data—*Trends, Characteristics, and Distribution*. The *Introduction* that follows describes these sections and the format of the Edition.

With the presentation of comprehensive data relating to the specialty, activity, and geographic distribution of physicians, this publication serves a wide audience. Hospitals, medical societies, medical schools, specialty boards, government agencies, associations, as well as, other health-related organizations have found earlier editions of this monograph to be significant data sources when conducting research on health care issues, trends in physician supply, and the availability of physician services. All data in this volume are derived from primary sources and represent the collection, management, and validation efforts of several Departments within the AMA Division of Survey and Data Resources.

In 1906, the AMA Physician Masterfile was established by the American Medical Association as a record-keeping system for physician membership and mailing purposes. Today, the AMA Physician Masterfile is the most comprehensive source of information for Doctors of Medicine (M.D.s) in the United States. The presentation of detailed and summary statistics in this updated Edition of the *Physician Characteristics and Distribution* volume represents the Association's commitment and historical role as a source of physician statistics that will continue to serve the data requirements and changing environment of health care in the United States.

Karen H. Andrews, Director
Division of Survey and Data Resources

Introduction

Physician Characteristics and Distribution, 1994 Edition is the latest in a series begun in 1963 as the *Distribution of Physicians*. It contains historical and current data on the U.S. physician population that provide a basis for comparison essential for health services research, program planning, and policy development. All summary and detail data on physicians in this edition have been compiled as of January 1, 1993 from the AMA Physician Masterfile maintained by the AMA Division of Survey and Data Resources. An historical and developmental overview of the AMA Physician Masterfile is provided as a preface to the general discussion. Included in this overview is a description of the structure of the File as well as data collection and management procedures.

Data in this publication, which includes only Doctors of Medicine (M.D.s), are presented in four separate sections on the **Trends, Characteristics, Distribution** of physicians, and **Primary Care** physicians.

The 1994 Edition includes a **Trends Section** with data from 1970 through 1993 for the physician characteristics of specialty, major professional activity, age, and sex. This Edition also presents national trend data for Metropolitan Statistical Areas (MSAs), female physicians, and international medical graduates (IMGs). Physician population ratios for selected years 1950-1993 are included as are ratios by state and specialty.

The **Characteristics Section** presents key professional and individual characteristics of the physician population. Cross tabulations include physicians by age, sex, major professional activity, and specialty. Also presented are data on 132 self-designated practice specialties (Table B-8 and Appendix B-2). The section provides separate tabulations for women physicians and foreign medical graduates, for physicians by country, school, and year of graduation, as well as data on specialty and board certification status.

The focus of the **Distribution Section** is the geographical location of physicians. The section is comprised of two major parts: (1) state summary data that include statistics on physicians by age and sex and international medical graduates (Tables C-1 through C-12), and (2) specialty and activity data for the nation as well as for states, census regions and divisions, MSAs and counties (Tables 1-14).

A new section has been added to the 1994 Edition on the *PRIMARY CARE SPECIALTIES* in which physicians practice. Data are presented in two groups consisting of: (1) the General Primary Care Specialties of Family Practice, General Practice, Internal Medicine, Obstetrics and Gynecology, and Pediatrics and *excludes* the subspecialties within these General Specialties; and (2) the Primary Care Subspecialties which *includes only* the subspecialties of those listed above. This section presents detailed tabulations about Primary Care physicians including the data variables of activity, age, sex, board certification, school and year of graduation, international medical graduates, state of location, and metropolitan area (Tables D-1 through D- 15).

A series of Appendices provide easy access to information on geographical locations and categories and include lists of states, divisions, regions, demographic county classifications, and the county composition for MSAs. Also provided are lists of specialties, major professional activity descriptions, and information on the American Specialty Boards. A sample of the Physicians' Professional Activities (PPA) questionnaire, which is sent to physicians in order to update the AMA Physician Masterfile, is also included.

Although this publication was designed to address and meet many of the anticipated data requirements concerning the physician population, various users may have specific requests for information from the AMA Physician Masterfile. Such inquiries regarding data contained in this publication or earlier publications or other inquiries concerning AMA Physician Masterfile data not contained in this publication are to be directed to the AMA Department of Data Services.

This publication is copyrighted and any use of data contained within this publication is to be referenced as follows: *Physician Characteristics and Distribution, 1994 Edition*, Department of Data Services, Division of Survey and Data Resources, American Medical Association, 1994.

AMA Physician Masterfile

The American Medical Association (AMA) has continued to develop a unique and comprehensive data base of physician and medical student information since the establishment of the Masterfile in 1906. Although initially the Masterfile was primarily used by the Association as a record-keeping device for membership and mailing purposes, today the File is widely considered to be the most complete and extensive source of physician-related information in the United States.

Current and Historical Information

The File contains current and historical data on all physicians, including members and nonmembers of the Association, and graduates of foreign medical schools who are in the United States and meet educational standards for recognition as physicians. International Medical Graduates (IMGs), comprising graduates of foreign medical schools residing in the U.S., are included in the Masterfile generally upon entry into graduate medical training programs accredited by the Accreditation Council on Graduate Medical Education (ACGME). Included also in the File are IMGs who have been granted a state license to practice medicine but may not have entered ACGME training programs. The File includes also physicians licensed to practice in the United States but who are temporarily located abroad.

A record is started on each individual upon entry into medical school or, in the case of international or Canadian medical graduates, upon entry into the United States. A physician's record includes medical school and year of graduation, sex, and birthdate. As the physician's training and career develop, additional information is added, such as residency training, state licensure data, board certification and National Board data. This information, which comprises the historical portion of the Masterfile, facilitates studies of trends in geographic mobility and medical education.

In addition, the current professional activities portion of each physician's record identifies geographical location and current address, type of practice (Patient Care or Nonpatient Care), specialties (primary, secondary, tertiary), and present employment (solo, partnership, group practice, medical schools, hospitals, government, and other organizations). These data are particularly useful in manpower planning and research. By definition, the current portion of the record is subject to constant change and must be updated continually through extensive monitoring and data collection activities. Over time, the objectives, collection techniques, and need assessments undergo regular review and change. Quality control, Masterfile expansion, and upgrading of the information collected and analyzed continue to be the major focus of the AMA's Division of Survey and Data Resources.

Data Collection and Update

A major source of data collection is the Record of Physicians' Professional Activities (PPA) mail questionnaire which AMA designed in 1968 in order to collect data under a new classification of physician activities based on "hours worked" criteria. The PPA questionnaire was sent every four years between 1969 and 1985 to all physicians residing in the United States as well as to the U.S. physicians residing temporarily overseas. Since 1985, the PPA survey has evolved into a rotating census in which approximately one-third of all physicians are surveyed each year. An additional 60,000 physicians are surveyed through monthly supplemental mailings, in cases where address or practice changes are indicated or anticipated. A copy of the PPA Questionnaire can be found in the Appendix.

Each physician is asked to indicate the number of hours worked per typical week within the following categories:

- **Professional Activity**—hours spent in Direct Patient Care or Nonpatient Care activities (i.e., Medical Teaching, Administration, Medical Research, Other)
- **Specialization**—hours spent in primary, secondary, and/or tertiary specialties
- **Present Employment**—hours spent by type of employer (i.e., self-employed, solo practice, two physician practice, group practice, medical school, nongovernmental hospital, and other patient care and nonpatient care employment).

- **Hospital Information**—hours spent in a hospital and/or office in a hospital

All returned questionnaires are passed through a series of clerical and computer editing procedures which assign major professional activity, specialty, and employment classifications to each physician's record on the basis of hourly information provided.

From information obtained through the PPA census, Masterfile records are updated whenever physicians move from one location to another, alter their professional activities or specialties, or change their employment arrangements.

Over the past decade, the PPA has undergone continuous expansion. In addition to the professional activity, specialty, and employment categories, the PPA survey now includes information about office addresses, principal hospital affiliations, telephone numbers, and other data. PPA census mailings coupled with telephone follow-ups have resulted in response rates in excess of ninety percent during the last few years.

While the data collected from the Record of Physicians' Professional Activities questionnaire represent a major source of information to the Masterfile, data are obtained also from several organizations and institutions. These primary sources and the data they provide include:

- **Medical Schools**—name, address, birthdate, birthplace, school and year of graduation
- **Hospitals**—physicians in graduate medical training including international medical graduates (IMGs) entering U.S. training
- **Medical Societies**—address and membership information
- **National Board of Medical Examiners**—medical students and physicians who have passed all parts of the National Board Examination
- **State Licensing Agencies**—licensure status of physicians
- **Educational Commission for Foreign Medical Graduates (ECFMG)**—IMGs who are certified or have applied for certification by the ECFMG
- **Surgeons General of the U.S. Government**—physicians in government services
- **American Board of Medical Specialties**—physicians certified by American Specialty Boards

The AMA Physician Masterfile utilizes data from primary sources only. Information is not entered on the Masterfile unless submitted or verified by a primary source. Other sources that may signal a change to the physician record include: AMA mailings and publications; addressing company mailings; physician correspondence; and correspondence from hospitals, government agencies, medical schools, medical societies, specialty boards, and state licensing agencies. Any indication of a change in address or activity triggers the mailing of a PPA questionnaire to the physician for confirmation of the change. While many sources provide data for inclusion on the Masterfile, data are also extracted from the Masterfile for use by these agencies. In addition, the File is used by various state and county societies, the pharmaceutical industry, publishers and several addressing companies.

Availability of Data

AMA data are available for research and other purposes. Safeguards to protect the confidentiality of these data and the AMA's proprietary rights have been mandated by the AMA's Board of Trustees. Inquiries about obtaining these data should be directed to the Department of Data Services, American Medical Association, 515 North State Street, Chicago, Illinois 60610.

Reference Material and Definitions

The reference material which follows provides definitions and explanations of the specific physician characteristics that are included in the tabulations of this publication. These materials are presented as a common reference base to facilitate the analysis and interpretation of the data. A new section on Primary Care Specialties has been added to this Edition.

Major Professional Activity

Major professional activity classifications are predicated upon hours worked per week as reported by physicians in the *Physicians' Professional Activities Questionnaire (PPA)*. The physician's professional activity is shown in the two categories of Patient Care and Nonpatient Care (i.e. Other Professional Activity). Patient Care activities include Office Based practice and Hospital Based practice, which comprises physicians in Residency training*, Clinical Fellows, and full-time members of hospital staffs. Nonpatient care activities include Administration, Medical Teaching, Research, and Other Activities.

In the 1987 Edition, the category of Clinical Fellows was added to the Hospital Based Practice group, which comprises Residents, Clinical Fellows, and Full-Time Physician Staff in hospitals. Previously, Clinical Fellows were included in the Research category. As a result of this change, there are fewer physicians in Research and a larger number in Total Patient Care compared to earlier years.

Physicians who are either retired, semiretired, permanently disabled, temporarily not in practice, or not active for other reasons are classified as Inactive. Physicians are categorized as Not Classified if the AMA has not received any recent information as to their type of practice and present employment.

Self-Designated Practice Specialty

A physician's self-designated practice specialty (SDPS) is determined, like major professional activity, by the largest number of professional hours as reported by the physician on the PPA questionnaire. Data in this volume are based on the SDPS codes contained in the AMA Physician Masterfile. For a detailed explanation of the SDPS codes, see Appendix D. Table B-8 and Appendix B-2 list all of the general and subspecialty categories as reported by physicians on the PPA questionnaire and maintained on the AMA Masterfile. Specialty classifications based on the 38 specialties used by the AMA for statistical purposes apply to the detailed Tables 1-14.

In the specialty tabulations presented in the Trends, Characteristics (except Table B-8), Distribution Sections, and the Detail Tables 1-14, the specialties of FP, GP, IM, OBG, and PD combine *both* the General Primary Care Specialties *and* the Primary Care Subspecialties within their respective specialty groups as listed in Appendix B-2. However, in the Primary Care section (D Tables), the specialty data are presented separately for the General Primary Care Specialties and the Primary Care Subspecialties.

Primary Care Specialties

In this Edition, a new section on Primary Care Specialties has been added. Detailed statistical data are presented in *two separate specialty groups* consisting of (1) the General Primary Care Specialties of Family Practice (FP), General Practice (GP), Internal Medicine (IM), Obstetrics and Gynecology (OBG), and Pediatrics (PD) and *excludes* the subspecialties within these General Specialties; and (2) the Primary Care Subspecialties which include *only* the subspecialties of the above groups. The Primary Care Subspecialties are listed in the footnote on Table D-1 and include the following:

- **FP Subspecialties**
  Geriatric Medicine (Family Practice) (FPG) and Sports Medicine (Family Practice) (FSM).

- **IM Subspecialties**
  Diabetes (DIA), Endocrinology & Metabolism (END), Hematology (HEM), Hepatology (HEP), Cardiac Electrophysiology (ICE), Infectious Diseases (ID),

---

*Includes residents in both accredited and nonaccredited training programs and is based on annual data received from hospitals. Residency data in this publication are not comparable with other such data published by the AMA (e.g.,*Directory of Residency Training Programs*).

Diagnostic Laboratory Immunology (Internal Medicine) (ILI), Geriatric Medicine (Internal Medicine) (IMG), Sports Medicine (Internal Medicine) (ISM), Nephrology (NEP), Nutrition (NTR), Medical Oncology (ON), and Rheumatology (RHU).

- **OBG Subspecialties**
  Gynecological Oncology (GO), Gynecology (GYN), Maternal & Fetal Medicine (MFM), Obstetrics (OBS), Critical Care Medicine (Obstetrics & Gynecology) (OCC), and Reproductive Endocrinology (REN).

- **PD Subspecialties**
  Adolescent Medicine (ADL), Critical Care Pediatrics (CCP), Neonatal-Perinatal Medicine (NPM), Pediatric Allergy (PDA), Pediatric Cardiology (PDC), Pediatric Endocrinology (PDE), Pediatric Pulmonology (PDP), Pediatric Emergency Medicine (PEM), Pediatric Gastroenterology (PG), Pediatric Hematology/Oncology (PHO), Diagnostic Laboratory Immunology (Pediatrics) (PLI), Pediatric Nephrology (PN), Pediatric Rheumatology (PPR), and Sports Medicine (Pediatrics) (PSM).

For comparison purposes, the "Detail D Tables" also include separate statistics for "All Other Specialties" and the "Not Classified" physicians. See note in the Self-Designated Practice Specialty section which explains the inclusion of the General Primary Specialties *Plus* the Primary Care Subspecialties as presented in the specialty tables for FP, GP, IM, OBG, and PD in the Trends, Characteristics, Distribution Sections, and the Detail Tables 1-14. Also, in this section on Primary Care, the specialty of Pediatric Cardiology is included in the PD Subspecialty group while in the Trends, Characteristics, and Distribution Sections, and Detail Tables 1-14, it is listed separately.

Board Certification

Board certification by one or more of the 24 American Specialty Boards listed in Appendix B-4 represents a voluntary effort on the part of the physician. The process of certification entails a complex and rigid series of requirements, including examination and successful completion of an approved residency training program. However, a licensed physician may practice in any specialty regardless of board certification status. Tables in this publication indicate *board certification in the corresponding specialty* in which the physician is classified. Although the attainment of certification demonstrates proficiency within a chosen discipline, "The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioner of medicine."[1]

The terms "corresponding board" and "non-corresponding board" in this publication (Tables B-12 through B-14) are used to describe the appropriate board certification status of physicians in relation to their self-designated practice specialty (SDPS) as follows:

- **Certified by Corresponding Board Only**
  Includes physicians in a specialty **(SDPS)** who are certified by the respective board having authority to grant certification for that specialty (for example, a physician in the specialty of Family Practice *certified only* by the American Board of Family Practice).

- **Certified by Corresponding Board and Non-Corresponding Board(s)**
  Includes physicians in a specialty **(SDPS)** who hold two or more certifications: *one* from the respective board having authority to grant certification in the physicians' self-designated practice specialty, ***AND*** *another* certification from a different board that does *not* grant certification in the physicians' practice specialty (for example, a physician in the specialty of Internal Medicine *certified* by the American Board of Internal Medicine *and also* the American Board of Surgery).

- **Certified by Non-Corresponding Board Only**
  Includes physicians in a specialty **(SDPS)** who are certified by a board that does *not* grant certification in the physicians' practice specialty (for example, a physician in the specialty of Emergency Medicine *certified by the American Board of Internal Medicine).*

- **Not Certified**
  Includes physicians who are not certified by any board.

A listing of the American Specialty Boards and information regarding certification in subspecialties and the granting of certificates of special competence are provided in Appendix B-4.

Other Physician Characteristics

Designations of federal and nonfederal employment are indicated in the tables found in this publication. Federal status is defined as full-time employment by the federal government, including the Army, Navy, Air Force, Veteran's Administration, the Public Health Service, and other federally funded agencies. Primary consideration for data in the Distribution section of this publication is given to the presentation of detailed information for nonfederal physicians.

The medical education of physicians is grouped into four graduation classifications: (1) U.S. Active Schools, (2) U.S. Inactive Schools, (3) Canadian Schools, and (4) International Schools. Schools of basic medical sciences as well as undeveloped medical schools which, although operational, have not graduated any physicians and therefore are not yet eligible for approval, are excluded from the tabulations. As of February 1990, the American Medical Association began using the term "International Medical Graduates" in place of "Foreign Medical Graduates" when referring to physicians who graduated from a medical school located outside of the United States, U.S. Possessions, or Canada. Data in prior editions of *Physician Characteristics and Distribution* refer to this population as "Foreign Medical Graduates".

Physician distribution by age is presented in ten-year intervals on a continuum from "Under 35" to "65 and over." Also included are distributions by sex.

MSA Definition

Based on the 1980 decennial census, the Federal Committee on Metropolitan Statistical Areas established a new set of criteria to designate metropolitan areas. The former Standard Metropolitan Statistical Area (SMSA) is now called the Metropolitan Statistical Area (MSA). The MSAs in this Edition adhere to the federal government's new revisions and definitions as listed by Sales and Marketing Management in their publication, "1992 Survey of Buying Power".

An area qualifies as an MSA in one of two ways: (1) if there is a city of at least 50,000 population, or (2) if there is an urbanized area of at least 50,000 population with a total metropolitan population of at least 100,000. In addition to the county containing the central city, an MSA may include additional counties having close economic/social ties to the central county. MSAs comprise entire counties, except for the six New England states, where towns/cities are the units of definition because of the lack of county governments. Except for this base unit, the same criteria are applied to define MSAs in New England as in the rest of the country.

The 319 MSAs used in this Edition are listed in Table 14 and in Appendix A-1. In Table 14, the name of each MSA is the name of the largest city or the first-mentioned of a compound name. In Appendix A-1, the full name of the MSA is listed. Those MSAs which are located in more than one state are designated by the state containing the largest city in that particular MSA.

Metropolitan data for 1970 and 1980 reflect variations of the current definition. Description of the earlier SMSA classifications are provided in the *Distribution of Physicians in the United States, 1970*,[2] and *Physician Characteristics and Distribution in the U.S., 1981*.[3]

Demographic County Classification

The Demographic County Classifications that appear in tabulations in this Edition are summarized in Appendix A-3. The MSAs in categories 6 through 9 adhere to the federal government's new revisions of metropolitan areas as described earlier in the "MSA Definition" section. Categories 1 through 4 comprise the remaining nonmetropolitan counties, according to the population in these areas.

The Group 5 county classification, which appeared in prior editions, does not appear in the 1990 Edition or later editions. Most of the counties in this group were redistributed, based on population, in categories 4 or 6. Elimination of the group 5 classification leaves eight county classification groups instead of the previous nine groups. Thus, data will not be fully comparable between the 1990 Edition and prior editions in the number of counties in the various demographic county classifications.

In 1967, the former "County Group Classification" of five groups was revised to include nine categories and was renamed the "Demographic County Classification." Any conversion of the prior five county groups to the present groups is not possible because of the different criteria used for each classification.

County Data

Beginning with the 1993 edition, the independent cities of Virginia are listed separately from the individual counties in Virginia, and are designated with the suffix (IC), shown in Table 12. In addition, the independent cities of Baltimore City, Maryland, and St. Louis City, Missouri are listed separately from the counties of Baltimore and St. Louis.

The independent city of Carson City, Nevada is listed as Ormsby County. Kalawao County in Hawaii is listed separately from Maui County. However, since Kalawao County has no local county government and is administered by the state of Hawaii, it may be included with Maui for statistical purposes. As of January 1979, Washabaugh County in South Dakota was annexed to Jackson County. Muscogee County, Georgia is listed as Muscogee; however, it is frequently referred to as the independent city of Columbus.

The Alaskan Boroughs/Census Areas are listed in Table 12, instead of the four Judicial Divisions appearing in editions prior to 1993. Table 12 lists only the seventeen Boroughs/Census Areas having physicians, rather than the entire twenty-seven defined by the U.S. Department of Commerce in its publication, *"Counties and Equivalent Entities of the United States, its Possessions, and Associated Areas"*.[4] The Boroughs/Census Areas not listed are: Aleutians East, Aleutians West, Bristol Bay, Denali, Ketchikan Gateway, Lake and Peninsula, Skagway-Hoonah-Angoon, Wade Hampton, Yakutat, and Yukon-Koyukuk.

Physician Trends

Increased demand for health services in the last two decades together with forecasts of health care resources and the number of physicians per capita through the year 2000 resulted in concern throughout the medical community that physician manpower would prove inadequate to meet the emerging health needs of the nation. To insure the supply of physicians, a variety of measures was implemented. Complicated immigration regulations and restrictions were modified to more readily allow the entry of foreign physicians into U.S. medicine. Earlier exchange programs were extended and supported to allow aliens to waive the two-year foreign residence requirement in the home or third country after studying in the U.S. if their admission was in the public interest[1], and medical schools received additional funding to expand capacities and accommodate larger enrollments. Government at both the state and federal levels authorized financing procedures and programs to achieve new health care objectives, while private foundations and medical associations undertook measures to parallel these efforts.

The 1970s, and in some cases the early 1980s, witnessed additional environmental developments that promised to have important effects on organized medicine. Some of these included: a change in the demographic characteristics and growth rate of the U.S. population, a shift in migration patterns, and an overall change in the composition of the physician supply.[2]

An examination of the historical physician profile reflects some of these general trends. Although these historical data should be useful to manpower planners and health policy analysts, the reader should at the same time be aware of certain limitations of the data.

Collection and Classification Systems

The *Re-Classification of Physicians' Professional Activities* project was initiated in 1967.[3] The purpose of the project was to increase the validity and reliability of physicians' records and to facilitate the classification of physician manpower in more functional categories.

Traditionally, the physician population was distributed between the two categories *Private Practice* and *Not in Private Practice*—a classification scheme affected more by the type of employer and fee-for-service versus salary forms of renumeration than by the actual activity of the individual physician. The new system introduced the more functional categories *Patient Care and Other Professional Activity*. This classification concept is based on the extent to which a physician is engaged in direct care of patients and is, therefore, more meaningful than a concept based on the financial characteristics of a practice. A good example of how the earlier system was based on employment rather than activity was the category Medical School Faculty. Most physicians who were employed by medical schools were placed in this category even though many of them spent more time in Research, Administration, or even in Patient Care than in actual teaching. In the new system Medical Teaching replaced Medical School Faculty to emphasize that only physicians who are*actively teaching* are included in this category.

A further limitation of the earlier system was the lack of a criterion upon which to base classification and the resultant necessity for each physician to classify himself without any guidelines. After consideration of alternatives, average hours worked per typical week was chosen as the most appropriate criterion for classification. The new system requests each physician to indicate the average number of hours worked per typical week in each of the activity, specialty, and employer categories. Actual classification of the physician is then accomplished through computer programs which assign primary activity, employment, and specialty classifications.

Under the new system, the Not Classified category was introduced as a contingency category for physicians for whom no information is available. Physicians are temporarily assigned to this category until additional follow-up information can be obtained that can insure proper classification. Also in 1968, as part of the reclassification effort, fellows were classified in Research rather than in Residency programs to reflect the assessment that a majority of fellows were engaged in medical research at that time. In 1986, a separate category was added for 'Clinical Fellows' which previously had been included in Research. See *Reference Material and Definitions*.

Federal and Nonfederal Physicians

Major Categories

Table aa demonstrates the numeric distribution of *all* physicians in major categories like Patient Care, the Primary Care specialties, school of graduation, and sex from 1970-1993. An analysis of the table reveals that the vast majority of U.S. physicians, although a decreasing majority, has remained in Patient Care — 83.4% (1970), 80.5% (1980), and 82.1% (1993). Federal physicians, however, while decreasing by one-third (-39.7%) between 1970-1980, increased by (21.9%) between 1980-1993. The proportion of female physicians to total physicians more than doubled between 1970-1993: from 7.6 percent to 18.8 percent.

Table aa

Federal and Nonfederal Physicians by Major Categories from 1970-1993

Category	1970	1980	1993
Total Physicians*	334,028	467,679	670,336
Federal	29,501	17,787	21,674
Nonfederal	301,323	443,502	647,008
Patient Care	278,535	6,512	550,448
Nonpatient Care	32,310	38,404	40,569
Primary Care Specialties**	136,637	186,227	265,084
Male	308,627	413,395	544,437
Female	25,401	54,284	125,899
U.S. Graduates***	270,637	362,307	510,731
International Med. Graduates	57,217	97,726	149,525
Canadian Graduates	6,174	7,646	8,839

*Address Unknown was excluded from all Federal/Nonfederal categories, and Not-Classified, Inactive and Address Unknown are excluded from Patient Care/Nonpatient Care categories.

**Includes General and Subspecialties of Family Practice, General Practice, Internal Medicine, Obstetrics/Gynecology, and Pediatrics.

***Excludes graduates from Inactive schools.

Sources: Table 1, Table 2, Table 6, Tables A-1, A-2, A-3, Table B-1 and B-2 and Table B-15.

Although physicians in the Primary Care specialties represented fairly stable proportions of the total physician population in the 23-year interim—40.9% (1970), 39.8% (1980), 39.4% (1993)—they demonstrated a percentage growth of 93.2 percent, from 136,637 physicians in 1970 to 263,946 physicians in 1993.

Table aa also suggests some striking distribution patterns for international and U.S. medical graduates. IMGs, for example, comprised 17.1 percent of total physicians in 1970 but in 1993 they constituted 22.3 percent. U.S. medical graduates accounted for 81.0 percent of all physicians in 1970 and 76.2 percent 23 years later. Table bb below displays a profile of country and year of graduation for federal and nonfederal physicians as of 1993. Of the 149,525 IMGs that constituted U.S. physician manpower in 1993, about half (45.4%) or 67,828 received their M.D. degrees *prior* to 1970 while about two fifths (37.3%) of the graduates from U.S. active schools or 190,723 physicians did so in the same time interim.

Activity

The major professional activity classification of physicians indicates whether a physician is engaged in direct care of patients or in Other Professional Activity. Patient Care is further subcategorized into Office Based and Hospital Based practice which includes residents, clinical fellows, and full-time hospital staff. Other Professional Activity includes Medical Teaching, Administration, Research, and the category of Other. Other was introduced in 1968 for physicians engaged in such activities as journalism, law, sales, or employed by pharmaceutical companies, medical societies, etc. Appendix B-3 provides a full definition for the Other category.

During the 10-year period from 1970-1980 (Table A-1) physicians in Patient Care increased by 97,977 for a gain of 35.2 percent. Between 1980-1993, 173,936 physicians were added to the Patient Care physician population for an increase of 46.2 percent. Within the Patient Care category between 1970-1980 there were increases of 41.3 percent in Office Based practice and 21.4 percent in Hospital Based practice. Since 1980, the complement of Office Based physicians grew by 46.6 percent while those in Hospital Based practice did so by 45.0 percent (a result of the Clinical Fellows category added in 1986).

Proportionate percentages of physicians in residency training since 1970 showed little fluctuation: 15.3% (1970), 14.7% (1975), 13.3% (1980), 13.0% (1993). However, the total number of residents since 1970 grew by 35,823 or by over two-thirds (69.9%). Figure 1 displays the distribution of the total physician population between 1970-1993 as well as the distribution of physicians in Patient Care, Office Based and Hospital Based practice.

Table bb below shows that a little less than two-fifths of physicians graduated from medical schools prior to 1970 (39.5%) and from U.S. medical schools (37.3%) (nearly all of which were active schools), and that these trends were even more pronounced for graduates of Canadian medical schools and international medical schools. Regarding the Canadians, nearly three-fifths (56.9%) graduated before 1970.

Table bb

Federal and Nonfederal Physicians by Year and Country of Graduation, January 1, 1993

	Year of Graduation					
	Number			Percent		
Country of Graduation	Total	Prior to 1970	1970 & Later	Total	Prior to 1970	1970 & Later
Total Physicians	670,336	264,644	405,692	100.0	39.5	60.5
U.S. Medical Schools						
Active Schools	510,731	190,723	320,008	100.0	37.3	62.7
Inactive Schools	1,241	1,066	175	100.0	85.9	14.1
Canadian Schools	8,839	5,027	3,812	100.0	56.9	43.1
International Schools	149,525	67,828	81,697	100.0	45.4	54.6

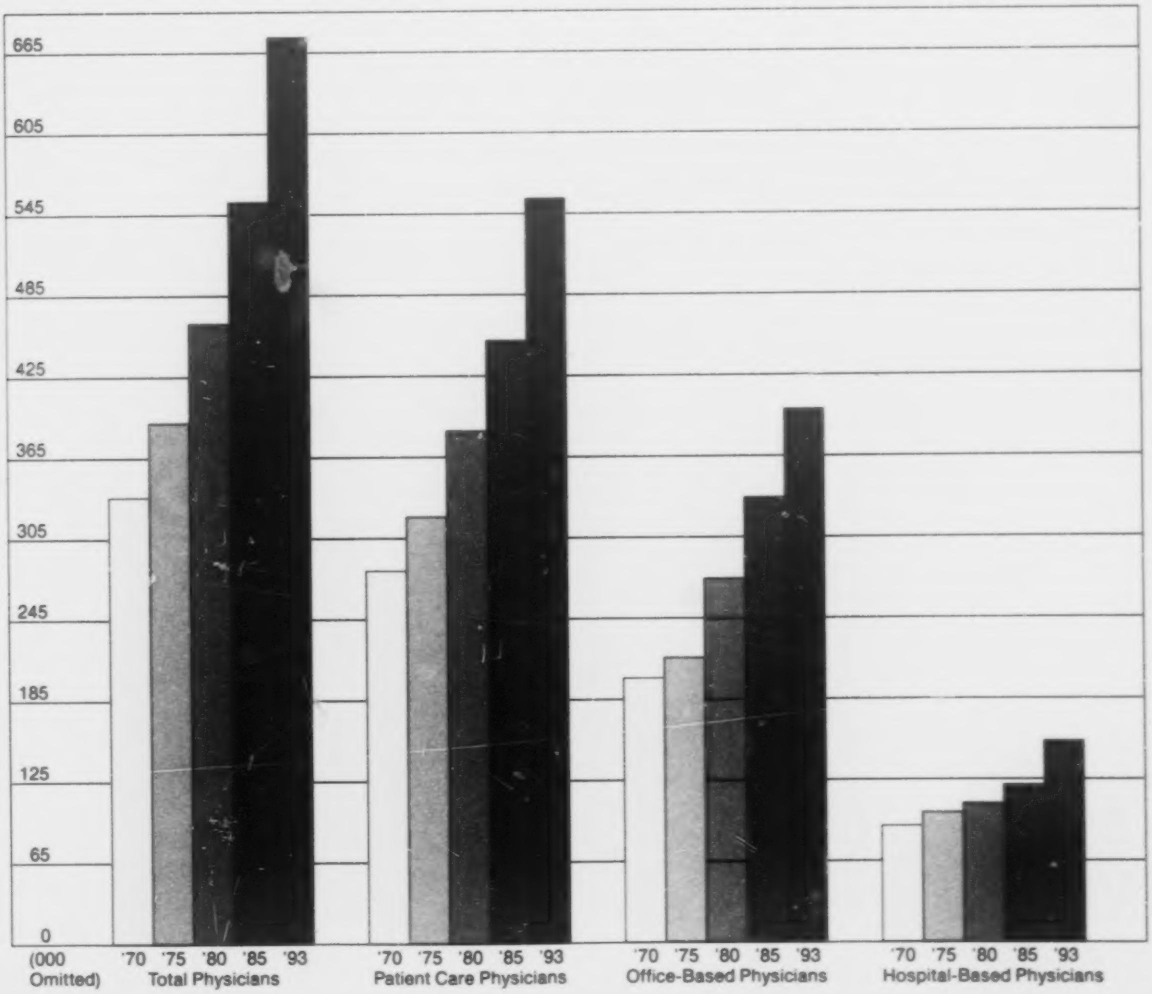
Figure 1

Federal and Non-Federal Physicians by Major Professional Activity for Selected Years 1970-1993



Source: Table A-1.

Specialty

Tables A-2 through A-4 demonstrates the relationship between specialization and physician supply between 1970-1993. The number of physicians in General Practice greatly decreased in the 23-year period, by 38,625. The decrease in the latter part of the decade may in part be explained by the establishment in 1975 of the discipline of Family Practice. Between 1975-1993, Family Practice showed an increase of 40,179 physicians while there were 23,051 fewer physicians in General Practice in 1993 than in 1975.

Between 1970-1980, the total physician population increased by 40 percent (Table A-4). However, the number of physicians in General Practice decreased by 43.9 percent in this same time interval. By contrast, in absolute numbers, Internal Medicine demonstrated a dramatic *increase* from 1970 (41,872) to 1980 (71,531) or 70.8 percent growth. Between 1980-1993, Internal Medicine increased by 54.6 percent for a gain of 39,052 physicians. In 1970, Diagnostic Radiology accounted for only 1,968 physicians out of a total physician force of 334,028 or 0.06 percent. In 1993, however, Diagnostic Radiologists numbered 18,463, representing 2.8 percent of all physicians for the year. Figure 2 demonstrates trends in the five highest specialties ranked by size in 1993 for selected years 1970-1993.

Age and Sex

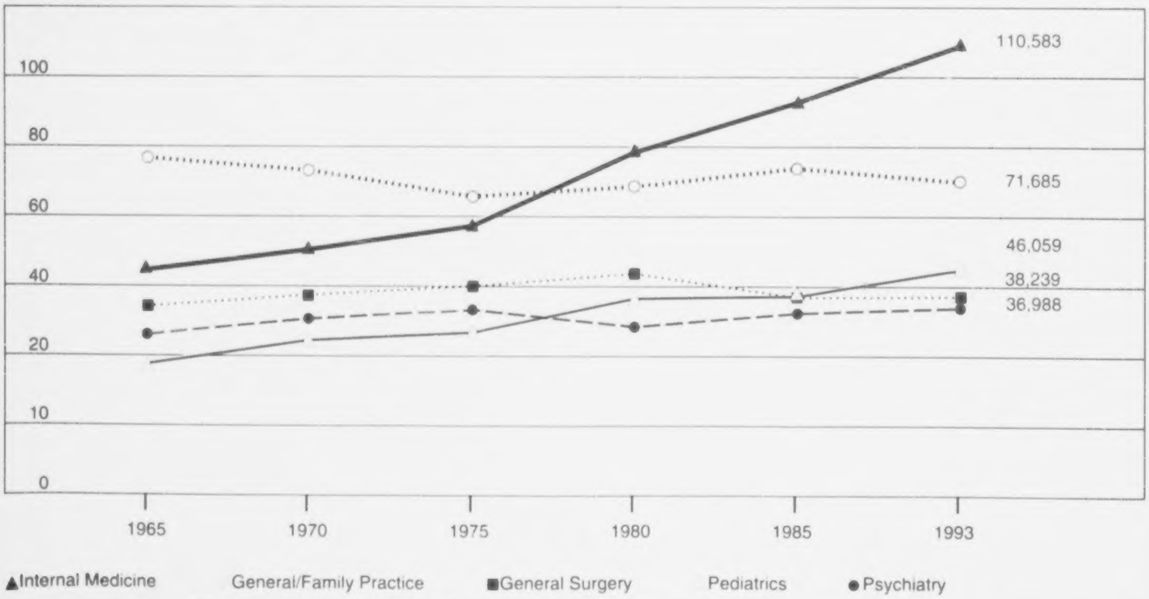
An age and sex profile of all federal and nonfederal physicians (Table A-5) indicated that a little over half were younger than 45 years of age in each of the selected years 1970-1993. This was also true of the male physician population, but the female physician population consistently showed higher percentages in the young age groups compared to males. In 1970, 58.4 percent of female physicians were under 45, compared to 69.4 percent in 1980 and 71.0 percent in 1993. Between 1970 and 1993, the number of female physicians under 45 showed almost a six-fold increase.

Despite large percentage increases among female physicians, nearly one-in-five total physicians were female in 1993 (18.8%) compared to approximately one-in-thirteen in 1970 (7.7%).

The total number of physicians of ages 65 and over almost tripled from 38,146 in 1970 to 108,804 in 1993, and their percentage of total physicians increased from 11.5 percent to 16.2 percent. However, the male-female distribution in this group changed little over the 23 year period, remaining at about 92 percent male and 8 percent female in both 1970 and 1993.

Figure 2

Trends in the Distribution of Federal and Non-Federal Physicians by Specialty for Selected Years 1965-1993



Sources: Table A-2
Distribution of Physicians in the U.S., 1965. Management Services Division, American Medical Association, 1967.

International Medical Graduates

Activity

A trend analysis of Tables A-6 through A-8 compared to A-1 reveals that total physicians increased by 336,308 between 1970-1993 or 100.7 percent while IMGs accounted for over one-fourth (27.4%) of this increase by gaining 92,308 physicians. In the 23-year interim, non-IMGs grew by 88.1 percent while IMGs increased by 161.3 percent.

Table cc below further reveals that in 1980, IMGs accounted for 20.9 percent of the total physician count of 467,679 while the percent climbed to 22.3 percent of the total count of 670,336 physicians in 1993.

Table cc

Total Physicians and International Medical Graduates by Activity for 1980 and 1993

	1980		1993	
Activity	Total	IMGs	Total	IMGs
Total Physicians	467,679	97,726	670,336	149,525
Patient Care	376,512	72,935	550,448	125,122
Office Based Practice	272,000	45,764	398,854	84,134
Hospital Based Practice	104,512	27,171	151,594	40,988
Residents	62,042	11,424	87,051	17,568
Clinical Fellows[1]			6,579	2,820
Full-Time Staff	42,470	15,747	57,964	20,600
Other Prof. Activity	38,404	8,656	40,569	7,367
Medical Teaching	7,942	1,569	7,870	1,399
Administration	12,209	1,533	14,524	1,918
Research	15,377	4,918	14,716	3,204
Other	2,876	636	3,459	846
Not Classified	20,629	10,235	14,668	6,597
Inactive	25,744	2,731	62,997	10,177
Address Unknown	6,390	3,169	1,654	262

[1] The Clinical Fellows Category was added in 1986.

Sources: Table A-1 and Table A-9.

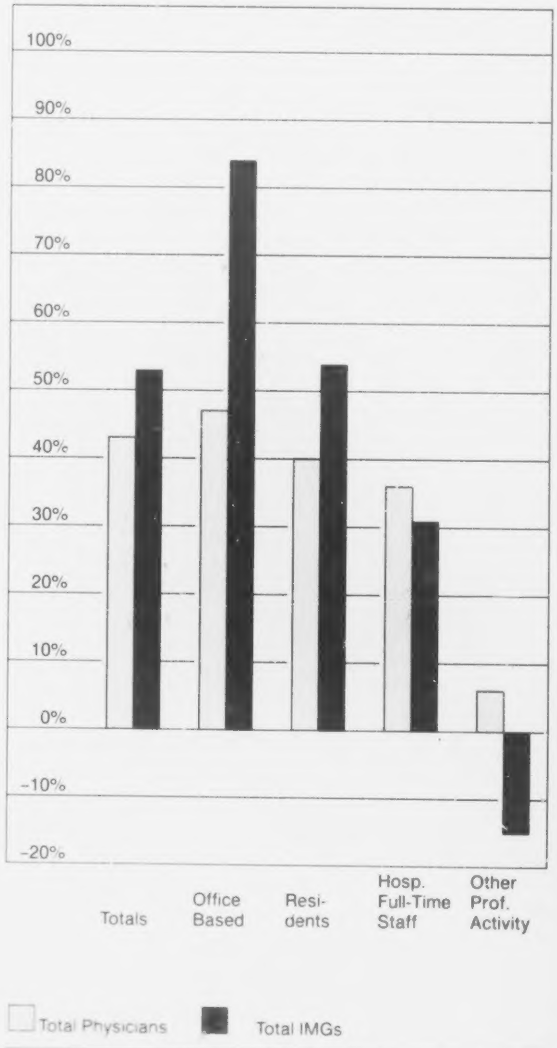
As a study of Table cc also indicates, however, IMGs in full-time staff positions decreased from 16.1 percent in 1980 to 13.8 percent 23 years later (Table A-9). This decrease may be attributed in large part to the variety of questions raised in the 1970s regarding the escalating number of alien physicians in the U.S., and the enactment of federal legislation in 1976 which placed limitations on the immigration of foreign nationals.* Figure 3 depicts the percent change of IMGs and total physicians by major professional activity categories from 1970-1993.

Specialty

All of the specialties listed in Table A-6 except for General Practice and Public Health had a larger number of IMGs in 1993 than in 1970. The following specialties increased over 100 percent from 1970 to 1993: Allergy and Immunology, Anesthesiology, Cardiovascular Diseases, Child Psychiatry, Colon and Rectal Surgery, Diagnostic Radiology, Emergency Medicine, Family Practice, Forensic Pathology, Gastroenterology, Internal Medicine, Neurology, Nuclear Medicine,

Figure 3

Percent Change in Total Physicians and International Medical Graduates by Major Professional Activity, 1980-1993



Source: Table cc

---

*Health Professions Educational Assistance Act of 1976 (P.L. 94-484). Title VI of P.L. 94-484 "Limitation of Foreign Medical Graduates" as amended by the Health Services Extension Act of 1977 further required IMGs emigrating to the U.S. for Graduate Medical Education to take and pass the VISA Qualifying Examination (VQE).

Obstetrics and Gynecology, Occupational Medicine, Orthopedic Surgery, Pediatrics, Physical Medicine and Rehabilitation, Plastic Surgery, Psychiatry, Pulmonary Diseases, Radiation Oncology, and Urological Surgery. Table dd displays the percent of total IMGs among the highest IMG specialties ranked by size in 1993. The table also provides percents and ranks for 1980.

Table A-9 shows changes in Major Professional Activity for international medical graduates from 1970 to 1993. Although most IMGs were in patient care for the years surveyed, the percentage in patient care has decreased from 84.2 percent to 83.7 percent. However, office-based practice increased from 1970 to 1993 (36.7% and 56.3%).

Table dd

Percent of IMGs In Highest IMG Specialties Ranked by Size, January 1, 1993

	Percent of Total IMGs		Rank	
Specialty	1980	1993	1980	1993
Internal Medicine	13.4	20.5	1	1
General/Family Practice	10.4	9.7	2	2
Pediatrics	6.8	9.0	5	3
Psychiatry	7.0	6.9	3	4
Anesthesiology	6.0	5.6	6	5
General Surgery	6.9	5.3	4	6
Obstetrics/Gynecology	5.4	4.7	7	7
Pathology	4.0	3.5	8	8
Cardiovascular Diseases	2.3	3.0	9	9

Source: Table A-7.

Women Physicians

Activity

Between 1980-1993, the number of total Federal and Nonfederal physicians grew by 43.3 percent (Table ee) while total women physicians increased 131.9 percent. Women physicians in patient care increased by 169.8 percent which was largely accounted for by the high increase in women physicians in office-based practice (217.5%). The next largest increase was in women residents (109.8%). Inactives increased 119.3 percent in this 23-year period.

Table ee also indicates increased representation of women in residency programs, growing from 21.5 percent of total resident physicians in 1980 to 32.1 percent in 1993. Women also demonstrated considerable percentage increases in Patient Care, from 10.6 percent of all physicians in 1980 to 19.6 percent 23 years later (see also Table A-13).

Table ee

Federal and Nonfederal Women Physicians by Activity for 1980 and 1993

	1980		1993	
Activity	Total	Women	Total	Women
Total Physicians	467,679	54,284	670,336	125,899

Sources: Table A-1 and Table A-13.

Specialty

The total number of federal and nonfederal women physicians increased nearly five-fold between 1970 and 1993 from 25,401 to 125,899 physicians (Table A-10). In 1970, only seven specialties had more than 1,000 women physicians: Pediatrics (3,816), General/Family Practice (2,486), Psychiatry (2,459), Internal Medicine (2,383), Anesthesiology (1,516), Obstetrics/Gynecology (1,337), and Pathology (1,273). By 1993, seventeen specialties had more than 1,000 women physicians:

Internal Medicine (24,280)
Pediatrics (19,249)
Family Practice (10,489)
Psychiatry (9,466)
Obstetrics/Gynecology (9,240)
Anesthesiology (5,585)
Pathology (4,334)
Diagnostic Radiology (3,222)
General Surgery (2,911)
Emergency Medicine (2,570)
General Practice (2,273)
Dermatology (2,067)
Ophthalmology (1,866)
Neurology (1,784)
Child Psychiatry (1,725)
Physical Medicine/Rehabilitation (1,475)
Cardiovascular Diseases (1,024)

Although rankings changed over time, all seven of the specialties having the most women physicians in 1970 remained among the top ranking in 1993. In 1970 these seven represented over half of the total female physician population (60.1%) and in 1993, 82.3 percent. Pediatrics had the highest count of women physicians in 1970, 1975, and 1980, but Internal Medicine had the most women physicians in 1985, 1990,1992, and 1993.

The total number of women physicians more than doubled between 1970 and 1980 (Table A-12). In that ten-year period, eight specialties grew three-times or more in the numbers of women physicians: Diagnostic Radiology, General Surgery, Internal Medicine, Neurological Surgery, Orthopedic Surgery, Plastic Surgery, Radiation Oncology, and Urological Surgery.

As Table A-12 indicates, from 1990 to 1993, the total number of women physicians increased by 20.8 percent. In that three-year period, six specialties exhibited growth of 30 percent or more in numbers of women physicians: Thoracic Surgery (40.0%), Orthopedic Surgery (34.2%), Diagnostic Radiology (33.3%), Nuclear Medicine (31.0%), Urological Surgery (30.6%), and General Preventive Medicine (30.5%).

Table A-13 shows that while the *number* of women in each of the activities has increased from 1970 to 1993, the *percentages* have decreased for each of the activities except for patient care, office-based practice and residents. Patient Care accounted for 72.3 percent of women physicians in 1970, and 85.7 percent in 1993. Office-based practice represented 36.3 percent of women physicians in 1970 and over half (52.0%) in 1993. Residents were 21.5 percent of women physicians in 1970 and 22.2 percent in 1993.

Metropolitan and Nonmetropolitan Areas

Tables A-14 and A-15 reveal that the percentages of physicians in each of the activity/specialty groups who are in metropolitan or nonmetropolitan areas changed little comparing 1980 and 1993. For example, considering total physicians, 86.9 percent were in metropolitan areas in 1980, and 88.5 percent in 1993. Considering physicians in General/Family Practice, 68.8 percent were in metropolitan areas in 1980 and 72.1 percent in 1993. Moreover, for 1980 and for 1993, the percentage growth rates in most of the activity-specialty groups were greater in metropolitan than in nonmetropolitan areas.

Except for Family/General Practice, 85 percent or more of nonfederal physicians in all major professional activities were located in metropolitan areas. In Medical, Surgical, and Other specialties, 87 to 90 percent of physicians were located in metropolitan areas; the remaining 10 to 13 percent were in nonmetropolitan areas.

In 1993, Family/General Practice had 10,303 more nonfederal physicians (58,075) as in 1980 (47,772). This increase is attributable to the gain of 8,996 Family/General Practitioners in metropolitan areas between 1980 and 1993 since nonmetropolitan areas remained nearly the same during this time period.

A comparison of metropolitan and nonmetropolitan percentage changes by specialty group between 1980 and 1993 indicates small relative increases for the various activity/specialty groups. For example, office-based practice in metropolitan areas comprised 84.4 percent of the total in 1980, and 86.7 percent in 1993. However, the number of physicians in the office-based practices (Family/General Practice, Medical Specialties, Surgical Specialties, and Other Specialties) experienced considerable growth from 1980 to 1993, with the percentage growth greater in metropolitan (51.0%) than in nonmetropolitan areas (25.3%). The Other Specialties group (see Table 13 for a list of the several specialties in this group) increased 7.9 percent in the metropolitan areas and decreased 7.2 percent in the nonmetropolitan areas in this period.

In 1980, the percentages of Hospital Based nonfederal physicians were 92.4 percent (metropolitan) and 7.6 percent (nonmetropolitan); in 1993, the comparable percentages were 94.4 and 5.6. In the period 1980 to 1993, nonfederal physicians in Hospital Based practice increased 42,208 in the metropolitan areas and 606 in the nonmetropolitan areas. The distribution of physicians in metropolitan areas discussed above is based on the MSA definition as given in the section on Reference Materials and Definitions.

Physician-Population Ratios

The physician-population ratios and rank by state in this section should not be interpreted as indicative of maldistribution, over or under-supply. Although some have used aggregate physician-population ratios to suggest availability or shortage, the ratios alone should not be construed as constituting an adequate measure of the quantity or quality of health care received by the American public. An analysis of health care requirements, ancillary medical resources, demographic and socioeconomic factors, and geographic location, among others, is required to assess equitable or optimal access to services. The ratios are provided therefore as general guidelines to allow comparisons of the distribution of physicians over time and among the states, as well as of selected specialties. It is recognized that equity in physician-population ratios between or among geographical areas is not necessarily a desirable goal.[4]

National Ratios

Ratios of total physicians per 100,000 total population varied little between 1950-1965 (Table A-16). However, ratios in subsequent years reflect substantial increments in physician supply. In 1993 there were over 80 percent more physicians per 100,000 total population than 33 years earlier—142 (1960) and 259 (1993). In absolute counts, the total physician population grew by 157.3 percent between 1960-1993, from 260,484 to 670,336, while the total population increased by only 41.5 percent, from approximately 183 million to over 259 million in the same interim. These data indicate physician growth at a rate *almost four times faster* than that of the total population.

In 1960 there were 703 persons per one physician. In 1993, the count was 387 or a little over *two-fifths fewer persons* per physician than 33 years earlier. The ratio of total physicians in Patient Care per 100,000 total population also improved over time. This ratio increased from 132 in 1965 to 212 in 1993, representing an increase of 60.6 percent physicians per 100,000 population in 28 years and growth for Patient Care physicians similar to that for the total physician population.

An analysis of Table A-17 indicates that nonfederal physicians increased by 140.3 percent between 1965-1993 while U.S. civilian population did so by only 32.3 percent, signifying an increase of over 100 percent more nonfederal physicians per 100,000 civilians from 1965 to 1993. Similarly, there were over *two-fifths fewer* civilians per nonfederal physicians in 1993 (397) than was the case in 1965 (720). The lower ratios can be attributed in large part to the fact that the growth rate of nonfederal physicians (140.3%) was over *four times* greater than that of the U.S. civilian population (32.3%) between 1965-1993.

The ratios of nonfederal Patient Care physicians per 100,000 civilians between 1965-1993 showed similar patterns. Nonfederal physicians in Patient Care totaled 237,482 in 1965 but 525,131 in 1993, a 121.1 percent gain. In 1965 there were 124 nonfederal Patient Care physicians per 100,000 civilians but by 1993 there were 207, an increase of over 60 percent (66.9%). The number of civilians per nonfederal physician in Patient Care steadily declined between 1965-1993 from 807 (1965) to 483 (1993). The upward trend in manpower supply and improved ratios reflects the fact that the nonfederal Patient Care physicians increase (121.1%) was at a rate of 3.8 times greater than that of the U.S. civilian population (32.3%) between 1965-1993.

Figure 4 illustrates trends in physician/population distributions for total physicians and population, nonfederal physicians and the civilian population, as well as for physicians in Patient Care.

State Ratios

Table ff displays the TEN highest ranking states in terms of absolute counts of nonfederal physicians in both 1980 and 1993. Also included are physician/civilian population ratios and a ranking of ratios for both years.

As Table ff reveals, the ten states showing highest counts of nonfederal physicians in 1980 remained the same in 1993. However, several states in the group did demonstrate a shift in their rank positions. California, ranked *first* in terms of total nonfederal physicians in 1980 and 1993. Its ratio on nonfederal physicians to civilian population grew from 248 (1980) to 274 (1993) but its ratio rank changed from 6 to 11. Although Maryland increased its physician force by 53.2 percent in the 12-year interim, its ratio rank remained at 3. Florida's nonfederal physician/population ratio increased from 208 to 263, and its ratio rank decreased from 11 to 12.

Table ff

States with Highest Counts of Nonfederal Physicians by Ratios Per 100,000 Civilians and Ratio Rank for 1980 and 1993

	1980				1993		
State	Total Non-Federal	Phys. Pop. Ratio	Ratio Rank	State	Total Non-Federal	Phys Pop. Ratio	Ratio Rank
California	58,368	248	6	California	83,825	274	11
New York	49,105	280	4	New York	66,213	366	4
Penn.	23,347	197	14	Texas	34,506	197	39
Texas	22,571	159	29	Florida	35,159	263	12

Michigan	15,347	166	24	New Jersey	22,593	291	8
New Jersey	14,799	201	12	Michigan	20,299	215	30

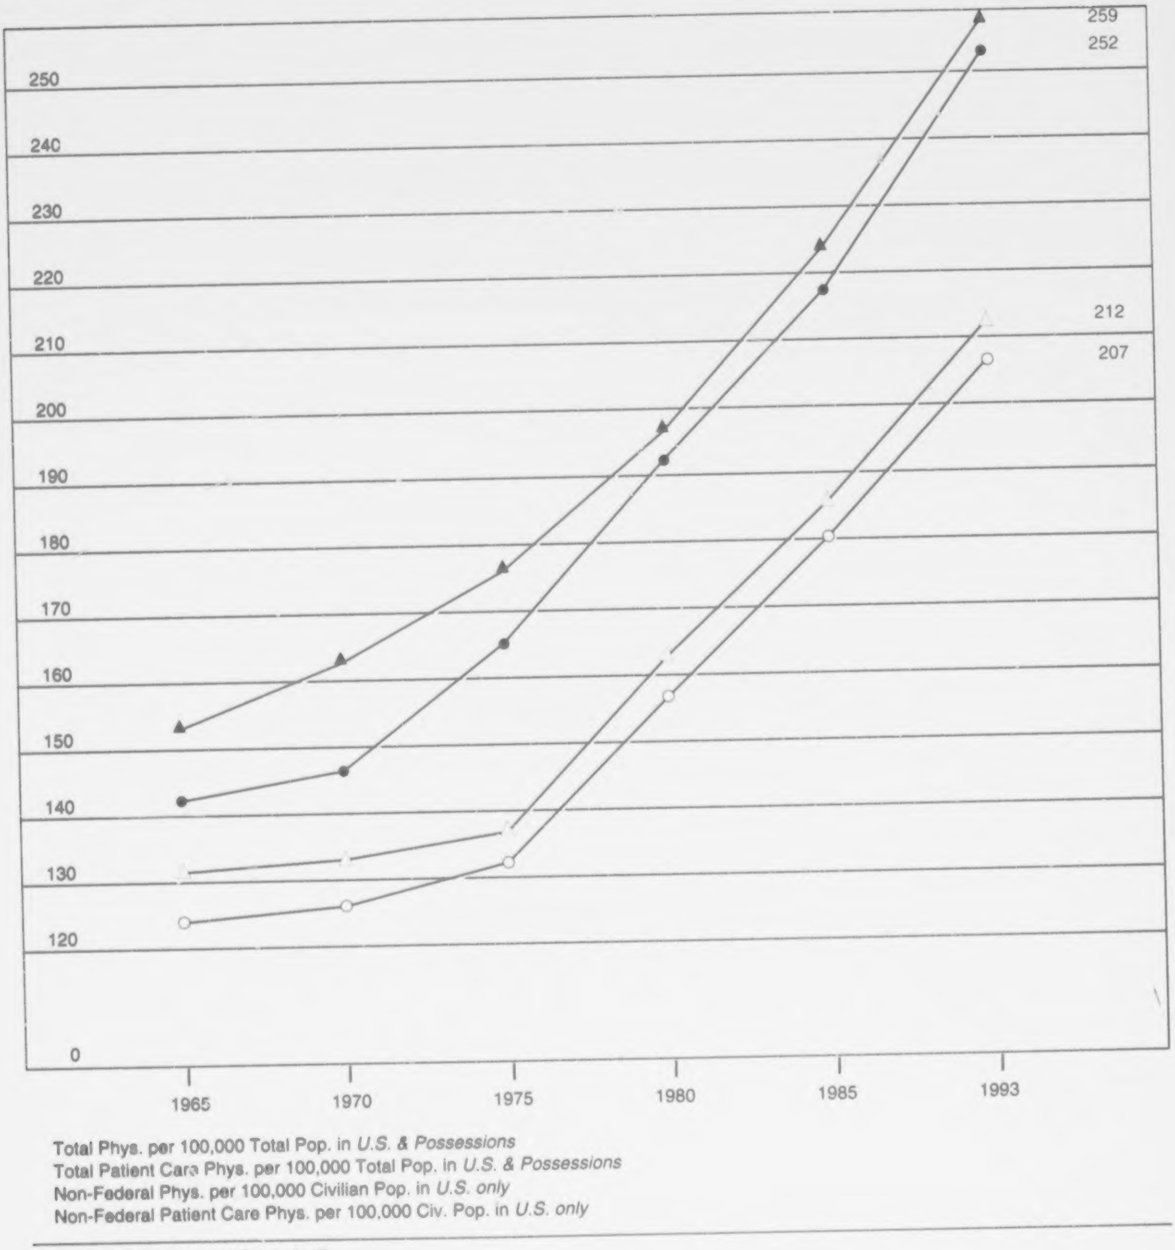
Source: Table A-18 and Table A-20.

Although the number of *nonfederal physicians per 100,000 civilian population* averaged 252 in 1993 (Table A-18), five states in 1993 had ratios *below* the 1975 national average of 169: Oklahoma (168), Wyoming (158), Alaska (155), Idaho (154), and Mississippi (145). Each of these states, however, had increased its individual ratio of physicians since 1975: for Oklahoma, the increase was 116.8 percent. None of the ratios for the states, D.C., and Possessions decreased during this period.

In 1975, New York had the second highest ratio (after Washington, D.C.) of nonfederal physicians per

Figure 4

Trends in Physician/Population Ratios for Selected Years 1965-1993



Sources: Table A-16 and Table A-17

100,000 population—258.** This ratio, however, was exceeded by eleven states and D.C. in 1993: District of Columbia (707), Massachusetts (393), Maryland (370), New York (366), Connecticut (354), Vermont (303), Rhode Island (297), New Jersey (291), Pennsylvania (281), Hawaii (278), California (274), and Florida (263). In both 1975 and 1993, D.C. exhibited the highest nonfederal physician ratio per 100,000 civilian population — 467 (1975) and 707 (1993), a ratio gain of 240. Nevada gained the least in the 18-year interim (a gain of 44).

The number of *nonfederal physicians per 100,000 civilian population* ranged from averages of 169 in 1975 to 252 in 1993 (Table A-18). In 1975, the national average of *civilians per nonfederal physician* was 593 (Table A-19), which decreased in each of the years shown to 397 (1993).

Table A-19 reveals that in 1975, sixteen states (including D.C.) had fewer civilians per nonfederal physician than the national average of 593. In 1993, fifteen states had ratios less than the national average of 397. Each state revealed a lower ratio in 1993 than in 1975. Table gg displays the TEN states demonstrating the *lowest ratios of civilians per nonfederal physician* less than the national averages of 593 (1975) and 397 (1993).

Table gg

Ten States having Lowest Population-Physicians Ratios by State for 1980 and 1993.

	Ratio of Civilians Per One Nonfederal Physician		
State	1980	State	1993
Dist. of Col.	173	Dist. of Col.	141
Massachusetts	351	Massachusetts	254
Maryland	356	Maryland	270
New York	357	New York	273
Connecticut	379	Connecticut	282
California	403	Vermont	330
Vermont	432	Rhode Island	337
Rhode Island	449	New Jersey	344
Hawaii	451	Hawaii	359
Colorado	477	California	365

Source: Table A-19.

In 1993, thirteen states (including D.C.) demonstrated physician-population ratios in *Patient Care* at or above the national average of 207 nonfederal physicians per 100,000 civilians (Table A-20). In this group, D.C. (538), Massachusetts (314), New York (301), and Maryland (290) had the highest Patient Care ratios. Mississippi (124), Idaho (127), Wyoming (131), Alaska (137), Oklahoma (143), Iowa (144), and Nevada (145) had the lowest. Fourty-one states exceeded the 1993 national average of 483 civilians per one nonfederal physician in Patient Care. The lowest ratios were indicated for D.C. (186), Massachusetts (319), New York (333), and Maryland (344). The six states in this group having the most civilians per nonfederal physician included: Mississippi (805), Idaho (788), Wyoming (764), and Alaska (730).

Specialty Ratios

As Table A-22 indicates, ratios between 1980-1993 showed increases of 30.8 percent for Office Based physicians from 117.6 (1980) to 153.8 (1993) and over 27.9 percent for total physicians: 202.2 (1980) to 258.6 (1993). If these ratios are considered as an "average" measure of ratio growth, then Dermatology, Internal Medicine, Neurological Surgery, and Obstetrics/Gynecology approximated this norm between 1980-1993. As General Practice ratios declined in the 1980s, Family Practice ratios demonstrated continuous increases: 7.9 (1980), 14.6 (1990), and 15.8 (1993).

The specialties of General Practice and Pathology represent predictable points on a continuum for assessing relative proportions of physicians in Office Based practice. The ratio spread was small between total physicians and Office Based physicians in General Practice in both 1980 (14.1 vs. 12.8) and in 1993 (7.5 vs. 6.6). Pathology, conversely, illustrates that physicians in this discipline are not Office Based in as large numbers as are General Practitioners—5.9 vs. 2.6 (1980) and 6.8 vs. 3.4 (1993). The ratio spread between total physicians and Office Based physicians in Internal Medicine grew substantially between 1980 and 1993 from a difference of 13.3 in 1980 to 16.7 thirteen years later.

The selection of specialties in Table A-21 was based on the disciplines indicating the highest absolute counts of physicians as of January 1, 1993.

NOTE: DATA FOR 1990 AND 1993 ARE AS OF JANUARY 1. DATA FOR 1980 ARE AS OF DECEMBER 31.

1 - INCLUDES PATHOLOGY AND FORENSIC PATHOLOGY.
2 - INCLUDES PEDIATRICS AND PEDIATRIC CARDIOLOGY.
3 - INCLUDES COLON AND RECTAL SURGERY AND THORACIC SURGERY.
4 - INCLUDES AEROSPACE MEDICINE, GENERAL PREVENTIVE MEDICINE, NUCLEAR MEDICINE, OCCUPATIONAL MEDICINE, PHYSICAL MEDICINE AND REHABILITATION, PUBLIC HEALTH, AND OTHER.
5 - INCLUDES INACTIVE AND ADDRESS UNKNOWN; THESE CATEGORIES ARE INCLUDED IN TOTAL PHYSICIANS ONLY, NOT IN OFFICE-BASED PHYSICIANS.

* REFER TO APPENDIX FOR DESCRIPTION OF SELF-DESIGINATED PRACTICE SPECIALTY CODES (SPDS).

NOTE: TOTAL POPULATION (000'S) INCLUDES U.S. RESIDENTS, ARMED FORCES OVERSEAS, AND CIVILIANS IN U.S. POSSESSIONS AS OF JULY 1 FOR CORRESPONDING YEAR. 1980 (231,266), 1990 (256,510), 1993 (259,250).

1 - INCLUDES PATHOLOGY AND FORENSIC PATHOLOGY.
2 - INCLUDES PEDIATRICS AND PEDIATRIC CARDIOLOGY.
3 - INCLUDES COLON AND RECTAL SURGERY AND THORACIC SURGERY.
4 - INCLUDES AEROSPACE MEDICINE, GENERAL PREVENTIVE MEDICINE, NUCLEAR MEDICINE, OCCUPATIONAL MEDICINE, PHYSICAL MEDICINE AND REHABILITATION, PUBLIC HEALTH, AND OTHER.
5 - INCLUDES INACTIVE AND ADDRESS UNKNOWN; THESE CATEGORIES ARE INCLUDED IN TOTAL PHYSICIANS ONLY, NOT IN OFFICE-BASED PHYSICIANS.

SOURCES: U.S. BUREAU OF THE CENSUS, CURRENT POPULATION REPORTS, SERIES P-25, NOS. 1075 AND 1045, U.S. GOVERNMENT PRINTING OFFICE, WASHINGTON, D.C., MARCH, 1992/1993 AND AUGUST, 1988. ALSO PRIOR ISSUES (NOS. 275, 276, 985, AND 999).

AMA PHYSICIAN MASTERFILE FOR 1980, 1990, AND 1993.

Physician Characteristics

This section provides relevant statistics on several key characteristics of the physician population in the United States as of January 1, 1993. These include information regarding (1) major professional activity, (2) primary specialty, (3) specialty board certification status, (4) age and sex, and (5) country, school, and year of graduation. Also presented are separate tabulations for women physicians and international medical graduates by their specialty and activity.

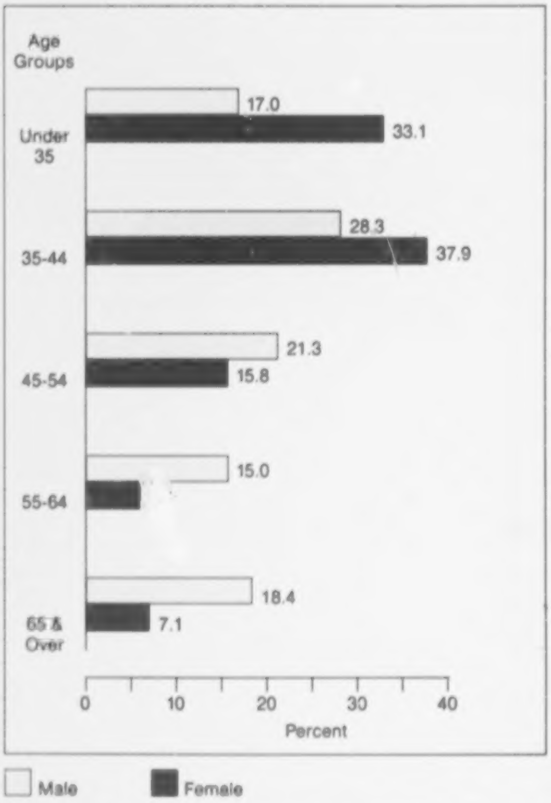
Activity by Age and Sex

Table B-1 indicates that in 1993, the majority of U.S. physicians were younger than 45 years of age (50.1%). The 35 to 44 age interval accounted for the highest percentage of total physicians (30.1%). Of all Office Based physicians (398,854), the highest percentage was indicated for the 35-44 age group—36.3 percent. Within the Administration total of 14,524, the largest proportion of physicians comprised the 55-64 group—nearly one-third or 30.6 percent. Physicians 65 and over numbered 108,804 or 16.2 percent of physician manpower in the U.S. Within this group, Patient Care accounted for about two-fifths—42.6 percent.

Of total women physicians (125,899), the highest percent (37.9%) were 35-44 years of age. Only 7.1 percent were 65 or over. About one-fourth (22.6%) of Office Based women were under 35 compared to 9.4 percent of Office Based male physicians in this same age group. One-third (37.1%) of all male physicians in Other Professional Activity were in Administration. Administration accounted for 29.3% of all women in Other Professional Activity. The age interval 35-44 comprised about one-third of both male and female physicians in medical teaching to represent the highest percentages among age intervals: male (32.1%), and female (48.6%). The 35-44 age interval also contained the highest proportionate percentages of both male (39.3%) and female (45.4%) physicians in Full-Time Staff. Figure 5 displays a percentage distribution of federal and nonfederal physicians by age and sex.

Figure 5

Percent Distribution of Federal and Non-Federal Physicians by Age and Sex, January 1, 1993



Source: Table B-1.

Specialty by Age and Sex

Table B-2 reveals that one-fifth (20.0%) of physicians were in the under 35 age group. The 35-44 interval contained 30.1 percent of the 1993 physicians. The remaining age groups revealed the following percentages: 45-54 (20.3%), 55-64 (13.3%), 65 and over (16.2%). An analysis of Table B-2 further indicates that at the beginning of 1993, two-thirds (66.1%) of all physicians (442,837) were in the 12 specialty fields of:

Internal Medicine (110,583)
Family Practice (52,362)
Pediatrics (46,059)
General Surgery (38,239)
Psychiatry (36,988)
Obstetrics/Gynecology (35,619)
Anesthesiology (29,827)
Orthopedic Surgery (20,980)
General Practice (19,323)
Diagnostic Radiology (18,463)
Cardiovascular Diseases (17,245)
Pathology (17,149)

These same specialties were also highest for all male physicians (Table B-3), representing 64.3 percent of the male population. Largest proportionate percentages of young male physicians (under 35) were indicated for the disciplines of Physical Medicine/Rehabilitation (28.2%), Internal Medicine (26.5%), Diagnostic Radiology (25.9%), General Surgery (25.8%), Anesthesiology (23.6%), Pediatrics (19.9%), Emergency Medicine (19.6%), and Family Practice (19.1%).

Unlike specialty distributions ranked by size for all male physicians and total physicians, the disciplines demonstrating highest numbers of female physicians (Table B-4) included:

Internal Medicine (24,280)
Pediatrics (19,249)
Family Practice (10,489)
Psychiatry (9,466)
Obstetrics/Gynecology (9,240)
Anesthesiology (5,585)
Pathology (4,334)
Diagnostic Radiology (3,222)
General Surgery (2,911)
Emergency Medicine (2,570)
General Practice (2,273)
Dermatology (2,067)

For these specialties, federal and nonfederal female physicians under 35 showed highest proportionate percentages in General Surgery (54.5%), Internal Medicine (43.4%), Orthopedic Surgery (43.2%), Obstetrics/Gynecology (40.7%), Family Practice (39.3%), and Diagnostic Radiology (39.3%).

Table hh illustrates the percent distribution by age for

Source: Tables B-6 and B-7.

total *non-federal male and female physicians* in the highest 12 specialties ranked by size.

As Table hh indicates, Internal Medicine and Diagnostic Radiology had the highest percentages of nonfederal male physicians under 35. For nonfederal female physicians under 35, the disciplines indicating highest proportionate percentages included General Surgery and Internal Medicine.

Distribution of 111 Specialties by Activity

Specialty data are reported by physicians on the PPA questionnaire and included on the AMA Physician Masterfile for a listing of 132 specialties. To meet user needs for more detailed specialty information, Table B-8 lists 111 out of the 132 specialties for which there is at least one physician. However, care must be exercised in the interpretation of the specialty data displayed in this table, which is the *only table* in this publication that presents the entire list of 111 specialties as reported by physicians on the PPA questionnaire. For all other tables in this volume, the list of 111 specialties is aggregated into the more generalized specialty categories. For example, the aggregation of specialties into a general category is displayed in Table B-2 in the specialty of Internal Medicine, which shows a total physician count of 110,583. In Table B-8 the Internal Medicine count of 110,583 is distributed among the subcategories of Internal Medicine (86,102), Oncology (5,084), Nephrology (4,251), Infectious Diseases (3,664), Endocrinology (3,198), Rheumatology (3,181), Hematology (2,867), Geriatric Medicine (1,460), Diabetes (522), Nutrition (236), Internal Medicine/Diagnostic Laboratory Immunology (17), and Cardiac Electrophysiology (1). The *List of Designated Specialty Codes* in Appendix B-2 presents the grouping of the detailed 111 specialties into the general specialty categories used throughout this publication.

The TEN specialties showing highest counts of physicians in 1993, in the 111 specialties in Table B-8 included: Internal Medicine (86,102), Family Practice (52,354), Pediatrics (40,828), Psychiatry (36,117), General Surgery (33,032), Obstetrics/Gynecology (31,825), Anesthesiology (29,748), Orthopedic Surgery (20,092), General Practice (19,323), and Diagnostic Radiology (18,463). Considering the residents only, the percentages of residents to total physicians in each of these specialties are: General Surgery (25.7%), Internal Medicine (24.9%), Diagnostic Radiology (18.8%), Pediatrics (16.3%), Anesthesiology (14.9%), Obstetrics/Gynecology (14.7%), Orthopedic Surgery (13.8%), Psychiatry (12.4%), and Family Practice (12.1%).

International Medical Graduates

Activity by Specialty

In 1993, International Medical Graduates (IMGs) accounted for 22.3 percent of the total physician population and 22.7 percent of the total physicians in Patient Care (Table B-9 and Table 1). Within the IMG population itself, 83.7 percent of physicians were in Patient Care. Of this group of 125,122 physicians, two-thirds (67.2%) were in Office Based practice, representing 21.1 percent of all Office Based physicians in the U.S. and possessions. IMGs accounted for 20.2 percent of all physicians in residency training and one-third (35.5%) of all Hospital Based full-time physician staff. One-fifth of all physicians in Research (21.8%) and one-out-of-six physicians in Medical Teaching (17.8%) were IMGs. Only 13.2 percent of all physicians in Administration were graduates of international medical schools.

About 60 percent (61.8%) of all IMGs were in the specialties of: Internal Medicine (30,690), Pediatrics (13,513), Psychiatry (10,248), Anesthesiology (8,399), General Surgery (7,975), Obstetrics/Gynecology (7,027), Family Practice (8,302), and General Practice (6,205). Over three-fifths (63.2%) of all IMGs in residency training were concentrated in the Medical Specialties while 22.4 percent were in Other Specialties. The Surgical Specialties comprised one-tenth of all IMG residents (7.5%) while General-Family Practice did so at only 6.8 percent.

Activity by Age and Sex

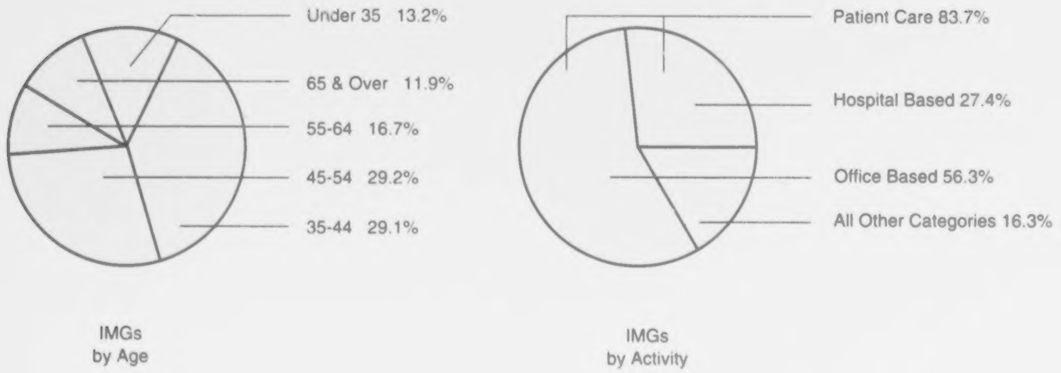
Over twice as many IMGs (Table B-10) were in the 35-44 age group in 1993 (29.1%) than in the under 35 group (13.2%). Women IMGs comprised 22.3 percent of the IMG complement. Age distribution for women IMGs indicated the highest percentage in the 35-44 group (32.7%) followed by 31.0 percent between 45-54. Nearly one-third of male IMGs (28.1%) were 35-44 while over one-fourth (28.7%) were in the group 45-54. Figure 6 illustrates the distribution of total IMGs by age and activity.

Women Physicians by Specialty and Activity

Representation of women physicians in medicine continues to show steady increases. In 1980, women comprised 11.6 percent of the physician force. In 1993, however, they accounted for 18.8 percent of the total physician population; they represented almost one-third (32.1%) of all residents in training in 1993 compared to 21.5 percent of the resident total in 1980[1] (Table B-11 and Table 1). Of the total female physician population of 125,899 over four-fifths (85.7%) were in

Figure 6

International Medical Graduates by Age and Major Professional Activity, January 1, 1993



Source: Table B-10

Patient Care. Within Patient Care, over three-fifths (60.7%) were in Office Based Practice. Counts of women physicians were highest in the specialties of Internal Medicine (24,280), Pediatrics (19,249), Family Practice (10,489), Psychiatry (9,466), Obstetrics/ Gynecology (9,240), and Anesthesiology (5,585). These specialties accounted for over three-fifths (62.2%) of all women physicians in 1993.Proportionate percentages of women in residency training in these specialties are displayed in Table ii.

Table ii

Federal and Nonfederal Female Physicians by Specialty and Residency Training, January 1, 1993.

Specialty	Total Female Physicians	Total Female Residents	Percent of Total
Internal Medicine	24,280	7,329	30.2
Pediatrics	19,249	4,216	21.9
Family Practice	10,489	2,434	23.2
Psychiatry	9,466	2,035	21.5
Obstetrics/Gynecology	9,240	2,395	25.9
Anesthesiology	5,585	1,028	18.4

Source: Table B-11.

Other Professional Activity, which includes Administration, Teaching, Research, and Other, accounted for 5.2 percent of the total female physician population. Women in Medical Teaching represented 20.5 percent of all physicians in Professorial Appointments, 13.3 percent of all physicians in Administration, and 16.3 percent of total physicians in Research (Table B-11 and Table 1).

Specialty by Board Certification

Table B-12 presents data on the specialty board certification status of physicians in the four categories of:

- Certified by Corresponding Specialty Board Only
- Certified by Corresponding Specialty Board and Others
- Certified by Other than Board of Corresponding Specialty
- Not Board Certified

In 1993 over two-fifths (47.9%) of all physicians were certified by their corresponding specialty board only while another 2.9 percent of physicians were certified by their corresponding specialty board and others. Physicians certified by a board other than that corresponding to their specialty totaled 62,603 or 9.3 percent of all physicians. Two-fifths (39.8%) of all physicians were not board certified. The greatest proportion of physicians certified in their specialty (including certification by corresponding board only, and certification by corresponding board and others) were physicians in the TEN specialties of:

Pediatric Cardiology (86.9%)
Radiology (85.8%)
Pulmonary Diseases (84.1%)
Gastroenterology (83.4%)
Cardiovascular Diseases (82.8%)
Ophthalmology (77.6%)

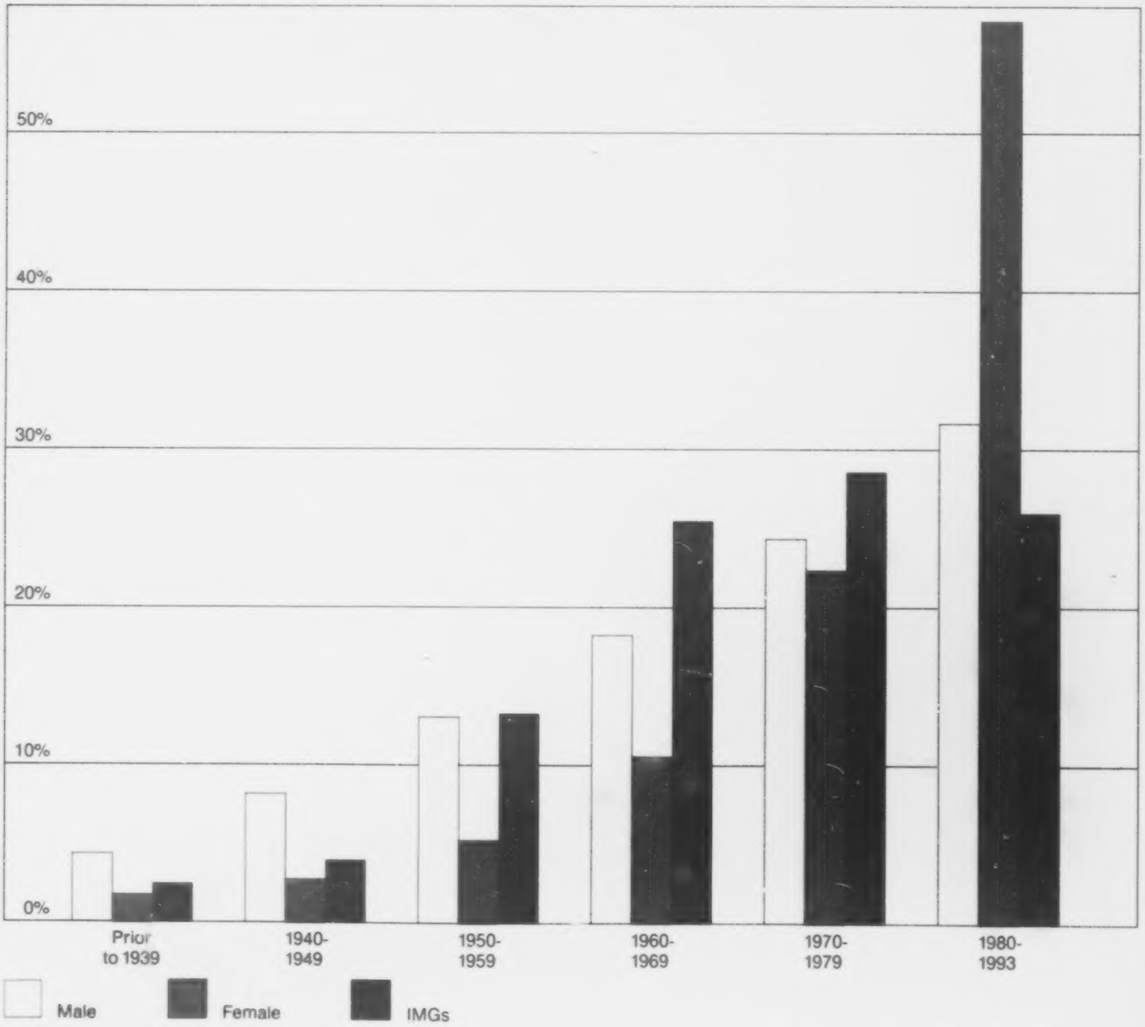
Forensic Pathology (74.9%)
Dermatology (74.7%)
Urological Surgery (74.4%)
Otolaryngology (72.4%)

Over one-half of male physicians (52.7%) were certified by a board corresponding to their specialties or certified by a corresponding board and other boards (Table B-13). The percentage of board certified women physicians in these categories was 42.6 percent (Table B-14).

Women physicians who were not board certified represented over half (50.8%) of all female physicians. Two-fifths (37.3%) of male physicians were without board certification. The FIVE specialties having the highest counts of women physicians and the proportionate percentages of women certified by corresponding board, other board or noncorresponding board included: Family Practice (59.4%), Pediatrics (57.4%), Internal Medicine (47.6%), Obstetrics/Gynecology (44.4%), and Psychiatry (40.5%). Largest specialties of male physicians and the proportionate percentages of physi-

Figure 7

Percent Distribution of International Medical Graduates Compared with Total Physicians by Sex and Year of Graduation, January 1, 1993



Sources: Table B-15, B-16, and B-17.

cians certified by corresponding board, other board, or noncorresponding board consisted of: Family Practice (72.3%), Pediatrics (70.7%), General Surgery (58.9%), Internal Medicine (57.6%), and Psychiatry (56.8%). See Appendix B-4 for a listing of specialty boards and the subspecialties certified. The board certification data in this publication are provided by the American Board of Medical Specialties.

School of Graduation by Year of Graduation

Table B-15 indicates that U.S. active schools accounted for 76.2 percent of all federal and nonfederal physicians in the U.S. and Possessions. Of this total of 670,336, about three-fifths (60.5%) received their M.D. degrees since 1970.

The TEN highest schools ranked by total number of graduates included: University of Illinois (11,336), Indiana University (9,878), University of Minnesota (9,425), University of Michigan (9,323), Jefferson Medical College (9,239), SUNY at Brooklyn (8,671), Harvard (8,126), Northwestern University (7,976), Ohio State University (7,960), and University of Tennessee (7,954). These schools graduated 89,888 physicians, who represent nearly one-in-five (17.6%) of all graduates of U.S. active medical schools.

Table B-16 and B-17 reveal that within the composite physician population, over three-fourths (79.5%) of all women physicians graduated from medical schools between 1970 and 1993 while 56.1 percent of the male physician population did so in the same time period.Of the 149,525 IMGs in the U.S. and Possessions in 1993, the highest proportion (28.6%) graduated between 1970-1979 (Table B-15). Figure 8 illustrates percentages of IMGs in comparison with female and male graduates proportionate to total physicians in each population from *Prior to 1930 through 1980-1993.*

As Figure 7 indicates, (1) the proportion of women graduates since 1970 in terms of the total female physician population has greatly exceeded the proportion of male graduates and (2) the proportion of IMGs obtaining their medical degrees reached its highest extent in the 1960s and the 1970s.

Physician Distribution

This section provides information on the geographic distribution of physicians in the United States and Possessions. Most of the data are presented under one of three main categories: *total physicians, federal physicians, and nonfederal physicians.* The first part consists of summary tables by state of location, age and sex for these categories as well as tabulations for international medical graduates and women physicians by state of location and activity. Data are shown also for counties without an active physician in Patient Care as well as the land area, resident population, and population density per square mile for these counties.

The second part includes detail tables of physicians by specialty and major professional activity for census regions and divisions, metropolitan areas, states, and counties. These data are especially resourceful for determining health program options and strategies to complement policy-related research. It is recognized, however, that important influences not reflected in these data have an impact on the distribution patterns of physicians. These determinants of physician location include: (1) community of origin, (2) medical education experience, (3) hospital facilities, (4) population size, composition and change, (5) urbanization, (6) cultural, social, and environmental conditions, (7) licensure requirements, and others.

Part 1—State Summary Data

State of Location, Age and Sex

Federal and Nonfederal Physicians

Table C-1 reveals that of a total physician population of 670,336, over half (57.2%) were located in the TEN states each having over 20,000 physicians in 1993. These ten leading states were: California (86,479), New York (67,165), Texas (36,487), Florida (36,142), Pennsylvania (34,224), Illinois (29,652), Ohio (25,780), Massachusetts (23,947), New Jersey (22,883), and Michigan (20,574).

Physicians younger than 45 years comprised one-half or more of the total physicians in each of these states except Florida (42.1%), California (44.6%), and New Jersey (49.1%). The state having the highest percentage of physicians in this age group was Massachusetts (55.6%).

Table C-3 indicates that there were more women physicians in California in 1993 than in any other state (16,154), or 12.8 percent of total women physicians. New York followed with (15,422) women physicians, and Pennsylvania (6,878). These three states in addition to Illinois, (6,634), Texas (6,274), Massachusetts (5,683), New Jersey (5,021), and Ohio (4,974) accounted for over half (53.2%) of all women physicians in 1993.

The distribution of physicians by age categories reveals a higher proportion of female physicians under 35 than male physicians. Table jj demonstrates the percent distributions by age groups and sex.

Table jj

Percent Distribution of Federal and Nonfederal Physicians by Age and Sex, January 1, 1993

Total	Under 35	35-44	45-54	55-64	65 & Over
BOTH SEXES					
100.0	20.0	30.1	20.3	13.3	16.2
MALE					
100.0	17.0	28.3	21.4	15.0	18.4
FEMALE					
100.0	33.1	37.9	15.8	6.1	7.1

Sources: Tables C-1, C-2, and C-3.

Male physicians under 35 (Table C-2) showed highest concentrations in New York (10,720), California (9,225), and Pennsylvania (5,410). More than one-fourth (27.5%) of all male physicians under 35 were located in these states. Table C-3 reveals that female physicians under 35 demonstrated highest counts in New York (5,091), California (4,611), and Pennsylvania (2,499). Cumulatively, these three states accounted for 29.2 percent of all women physicians under 35.

Federal Physicians

The states of California (2,654), Texas (1,981), Maryland (1,973), Florida (983), and Virginia (973) comprised over one-third (39.5%) of all federal physicians (Table C-4). Of total federal physicians, 34.0 percent were under 35. One half of federal physicians in the state of Hawaii (57.9%) were in the under-35 age group, the highest proportion among the states.

Largest counts of male federal physicians (Table C-5) were found in California (2,215), Texas (1,655), and Maryland (1,576); female federal physicians (Table C-6), California (439), Maryland (397), and Texas (326). The three highest ranking states in each case accounted for approximately 30 percent of the physician population—30.6 percent for male and 30.1 percent for female.

Nonfederal Physicians

Table kk indicates that the percentage distribution of nonfederal female physicians (Table C-9) compared to the distribution of nonfederal male physicians (Table C-8) varied widely in the younger and older age groups.

Table kk

Percent Distribution of Nonfederal Physicians by Age and Sex, January 1, 1993

	AGE GROUPS				
Total	Under 35	35-44	45-54	55-64	65 & Over
			BOTH SEXES		
100.0	19.5	30.1	20.3	13.4	16.6
			MALE		
100.0	16.4	28.3	21.4	15.1	18.8
			FEMALE		
100.0	33.0	38.0	15.8	6.0	7.2

Sources: Tables C-7, C-8, and C-9.

Of the FIVE states demonstrating largest counts of nonfederal female physicians — California, New York, Pennsylvania, Illinois, and Texas — proportionately the highest percentages of women physicians under 35 were found in Pennsylvania (36.4%) and Texas (35.3%).

The number of all nonfederal physicians (Table C-7) was highest in California, New York, Texas, Florida, Pennsylvania, Illinois, Ohio, Massachusetts, New Jersey, and Michigan. Approximately three-fifths (57.7%) of all nonfederal physicians were located in these ten states. These states also comprised nearly 3 out of 5 (59.2%) of all nonfederal physicians under 35.

State of Location and Activity

Federal and Nonfederal Female Physicians

Table C-10 displays the numbers of federal and nonfederal women physicians by state of residence. Over half of the nonfederal women physicians were in Office Based practice (53.8%), followed by Hospital Based practice (32.0%), and Other Professional Activity (14.2%). A further analysis of Table C-10 reveals that over one-half of nonfederal female physicians (49.9%) were concentrated in the seven states of California (15,715), New York (15,204), Pennsylvania (6,767), Illinois (6,487), Texas (5,948), Massachusetts (5,603), and New Jersey (4,943). Within this population, 53.8 percent were Office Based. For these states, over one-half of the nonfederal women physicians in California (58.4%), Texas (56.0%), New Jersey (52.6%), Illinois (52.3%), and Pennsylvania (50.0%) were in Office Based practice. New York, however, had proportionately the highest percentage of Hospital Based women physicians (40.2%).

Federal and Nonfederal IMGs

The states of New York (26,717), California (16,031), Florida (11,299), New Jersey (10,002), and Illinois (9,890) accounted for one-half (50.8%) of all nonfederal IMGs in the U.S. More nonfederal IMGs were in Office Based practice in 1993 (57.8%) than in any other major professional activity (Table C-11). Of these five states, California had the highest percentages of IMGs in Office Based practice (65.9%). In the remaining four states, the percentages were over one-half, except for New York (47.0%).

New York (9,812), New Jersey (3,132), and Illinois (2,663) showed the largest concentration of Hospital Based nonfederal IMGs. New York had proportionately the most hospital based IMGs (36.7%) of these states. There were also more nonfederal IMGs in Other Professional Activities in New York than in any other state (4,337).

The states having the highest counts of federal IMGs included: New York (399), California (346), Texas (248), Florida (246), and Illinois (227). Cumulatively these states represented 1,466 IMGs or two-fifths (39.0%) of all federal IMGs in the nation. In each case, more federal IMGs were Hospital Based than Office Based. As percentages of the total federal IMGs, these states have the highest percentages of federal Hospital Based IMGs: Alaska, Maine, Nevada, New Hampshire, Vermont, Idaho, Montana, and Pacific Islands (all 100.0%), Delaware (96.0%), North Carolina (95.0%), Virginia (94.5%), Alabama (94.2%), West Virginia (94.2%), Oklahoma (93.9%), Tennessee (93.5%), Oregon (92.9%), Puerto Rico (92.3%), Minnesota (92.3%), Indiana (92.2%), and Kansas (92.0%); all at or above ninety-two percent. In 1993, there were more federal IMGs in Other Professional Activities located in the states of California, New York, Maryland, Illinois, Florida, and Texas than any other states—altogether 48.6 percent of all IMGs in Other Professional Activities.

Counties without an Active Physician in Patient Care

In assessing the contents and findings presented in Table C-12, it is important to keep in mind the various concepts, measures, and analytical factors involved in determining physician shortage. Spatial distribution of physicians at the county level, like the larger issue of physician diffusion, includes complex considerations like physical barriers and the geographical location of the county.

In 1993, the 149 counties without an active physician in Patient Care covered 216,695 square miles or approximately 6.1 percent of the total U.S. land area. Over one-half million (555,784) people resided in these counties. The most populous county (13,100) was Lincoln in Arkansas, while Loving county in Texas was the least populated (100). Each of the counties without an active physician in Patient Care is listed in Table C-12, along with its land area, resident population, and population density per square mile.

Part 2—Specialty and Activity Data By Geographic Location

Federal and Non-Federal Physicians (Table 1)

The geographic distribution for the 670,336 physicians in the United States and Possessions is presented in Tables 1-14. Although no interpretation is presented or intended for the complex issue of physician diffusion, the data are resourceful in studying the composition of the physician supply by both specialty and major professional activity at the national, state, county, and metropolitan levels. In Table 1, total physician count includes the categories of Not Classified (14,668), Inactive (62,997), and Address Unknown (1,654).

In 1993 *over three-fourths* (82.1%) of the 670,336 physicians were in Patient Care (Table 1). Of the 550,448 physicians in Patient Care, 72.5 percent were in Office Based Practice, 15.8 percent were in residency training, 1.2% were clinical fellows, and 10.5 percent comprised full-time hospital staff. Patient-care physicians in the Primary Care specialties of Family Practice, General Practice, Internal Medicine, Pediatrics, and Obstetrics/Gynecology accounted for 263,946 physicians, or nearly half (48.0%) of all physicians in active Patient Care. The five HIGHEST specialties ranked by size for total physicians included Internal Medicine, Family Practice, Pediatrics, General Surgery, and Psychiatry. Table II illustrates the percentage distribution of physicians in these specialties by Patient Care, Office Based practice, and residency training as of 1993.

Table II

Percent Distribution of Five Highest Ranking Specialties by Selected Major Professional Activity, January 1, 1993

		MAJOR PROFESSIONAL ACTIVITY		
Specialty	Total	Patient Care	Office Based	Residents All Years
Internal Medicine	100.0	92.0	60.9	21.0
Family Practice	100.0	96.7	78.3	12.1
Pediatrics	100.0	92.9	66.9	15.7
General Surgery	100.0	96.7	63.7	22.4
Psychiatry	100.0	91.2	60.2	12.1

Source: Table 1.

Federal Physicians (Tables 2-5)

Over three-fourths (86.7%) of all federal physicians in 1993 were in Patient Care (Table 2). Internal Medicine comprised 64.7 percent of all federal physicians in the medical specialties while one-third (39.3%) of all physicians in surgical specialties were in General Surgery.

Of the 21,674 physicians in federal service, 69.4 percent were located in the South and West Census Regions (Table 3). These regions consisted of nearly three-fourths of all federal physicians in Administration (71.9%) and in Research (72.0%). This significant area-clustering is largely attributed to the geographic location of the National Institutes of Health in Washington, D.C. About three-fifths (60.4%) of all federal physicians in Medical Teaching were concentrated in the South Atlantic (110), Pacific (89), and West South Central (73) Census Divisions (Table 4). Federal physicians in Administration also demonstrated highest frequencies in these census divisions, or 61.1 percent of all federal physicians in Administration.

Over 90 percent of federal physicians in each of the Armed Forces (Table 5) were in Patient Care, nearly two-thirds were in Patient Care within the Public Health Service (64.8%), and about three-fourths (78.8%) were in Patient Care within the Veterans Administration and other Federal Agencies (61.2%).

Nonfederal Physicians (Table 6-12)

Patient Care accounted for 82.2 percent of all nonfederal physicians in 1993 (Table 6). Of the total number of physicians in Patient Care (531,659), three-fourths (75.0%) were in Office Based practice. Of a resident total of 83,097, over half (56.1%) were specialists in the disciplines of Internal Medicine, General Surgery, Pediatrics, Psychiatry, and Obstetrics/Gynecology. Percentages of total physicians in residency training in these specialties are as follows: General Surgery (22.5%), Internal Medicine (21.3%), Pediatrics (15.5%), Obstetrics/Gynecology (12.8%) and Psychiatry (12.4%).

Regarding nonfederal physicians in census regions, the South (30.4%) and the Northeast (25.9%) accounted for the largest percentages (Table 7). The North Central region had proportionately more physicians in Patient Care (83.9%) than any other region, while the Northeast had the greatest proportion of physicians in residency training (16.1%).

Table mm illustrates the distribution of nonfederal physicians by census regions for 1970, 1980, and 1993. In the 13-year period from 1980, the Possessions (85.8%), South (54.1%), and the West (48.1%), have demonstrated the highest percentages of growth.

Table 8 presents physician data by Census Division (see Appendix A-2). The Middle Atlantic Census Division had the highest number of nonfederal physicians in 1993 with 122,532. The South Atlantic Census

Table mm

Distribution and Percent Change of Nonfederal Physicians by Census Region from 1970-1993

				PERCENT CHANGE	
Census Region	1970	1980	1993	1970-1980	1980-1993

Sources: Tables 6 and 7.
Physician Characteristics and Distribution in the U.S., 1994 Edition.
Department of Data Services, Division of Survey and Data Resources, American Medical Association, 1994. Also prior editions.

Division ranked second with 112,888 followed by the Pacific Census Division with 108,099 and the East North Central Division with 96,247 nonfederal physicians.

Civilian population and physician-population ratios for the divisions are provided in Table nn. These ratios are presented as general guidelines to compare the distribution of physicians among the divisions and not as definitive measures of physician supply. It is recognized that the quality and quantity of health care are predicated on a variety of factors such as medical need for services, demographic composition, geographical location, and socioeconomic variables, among others.

As Table nn indicates, the New England and the Middle Atlantic divisions had the largest numbers of nonfederal physicians per 100,000 civilian population with 344 and 324, respectively. The fewest numbers of physicians per 100,000 civilian population were located in the East South Central (197) and West South Central (195) divisions. The ratios for the divisions are illustrated in Figure 8.

Table 9 represents the distribution of nonfederal physicians by state, specialty, and major professional activity. Over one-third of all nonfederal physicians (33.9%) were concentrated in the states of California (13.0%), New York (10.2%), Florida (5.4%), and Texas (5.3%). In Table 10 the specialty and activity distributions of

Metropolitan Data

(Tables 13-14)

Table 13 illustrates that of the total number of nonfederal physicians in metropolitan areas, 82.3 percent were in Patient Care. Office Based practice accounted for almost three-fourths (73.3%) of these Patient Care physicians. The specialties showing the largest numbers of physicians in Office Based practice were Internal Medicine, Family Practice, Pediatrics, Obstetrics/Gynecology, and Psychiatry. These disciplines represented nearly half (47.0%) of all Office Based physicians in metropolitan areas.

In 1993, the 319 metropolitan areas (MSAs) listed in Table 14 contained 88.5 percent of the total nonfederal physician population of 647,008 (Table 6). In 1970, 86.6 percent of all nonfederal physicians were located in MSAs. Figure 9 illustrates physician distributions in both MSAs and non-MSAs in 1970 and in 1993.

Although the overall physician supply improved in rural areas during the 1970s and 1980s, the gap between urban and rural communities remained about the same. Between 1970-1993 metropolitan areas gained 314,120 nonfederal physicians (from 258.265 in 1970 to 572,385 in 1993) for an increase of 121.6 percent compared with nonmetropolitan areas which added 31,565 nonfederal physicians (from 43,058 in 1970 to 74,623 in 1993) for an increase of 73.3 percent.

Aproximately 82.3 percent of all nonfederal physicians in metropolitan areas were in Patient Care in 1993 while over one-fourth of the physicians in Patient Care (26.6%) were in Hospital Based practice (Table 13). Physicians in metropolitan areas comprised 94.4 percent of all nonfederal physicians in Hospital Based practice. This significant distribution reflects the clustering of interns, residents, and full-time staff in large metropolitan and university-affiliated teaching hospitals. In the Metropolitan Areas, Office Based Medical specialties represented 71.5 percent of metropolitan physicians in Patient Care, while the Surgical specialties were 78.0 percent, Other specialties, 67.9 percent, and General/Family Practice, 83.6 percent (Table 13).

Figure 9

Non-Federal Physicians by Metropolitan and Non-Metropolitan Areas in 1970 and 1993

Department of Survey Research, American Medical Association, 1971.

Primary Care Specialties

With the current focus on health systems reform and the specialty composition of physicians in the workforce, this new section with detailed statistical information about Primary Care Specialties has been added. It presents data on trends for the two groups of General Primary Care Specialties and Primary Care Subspecialties from 1970 to 1993. Information is provided on the major professional activity of Primary Care physicians, their age and gender, board certification, school and year of graduation, and state of location. Data are also presented for international medical graduates (IMGs) in Primary Care and the number of those located in metropolitan areas.

The detailed tabulations in this section present data for two separate specialty groups including (1) the General Primary Care Specialties of Family Practice, General Practice, Internal Medicine, Obstetrics and Gynecology, and Pediatrics (excludes the subspecialties within these General Specialties); and (2) the Primary Care Subspecialties which include *only* the subspecialties of the above groups. For a listing of the Primary Care Subspecialties, refer to the section on *Reference Material and Definitions* or to the footnote on Table D-1.

The statistics in this section, while focusing on the General Primary Care Specialties and Primary Care Subspecialties, also provide information on the *total active physician population*, the number of physicians in *all other specialties*, the not classified group, and inactive physicians. All tables in this section include data on federal and nonfederal physicians, except for Table D-15.

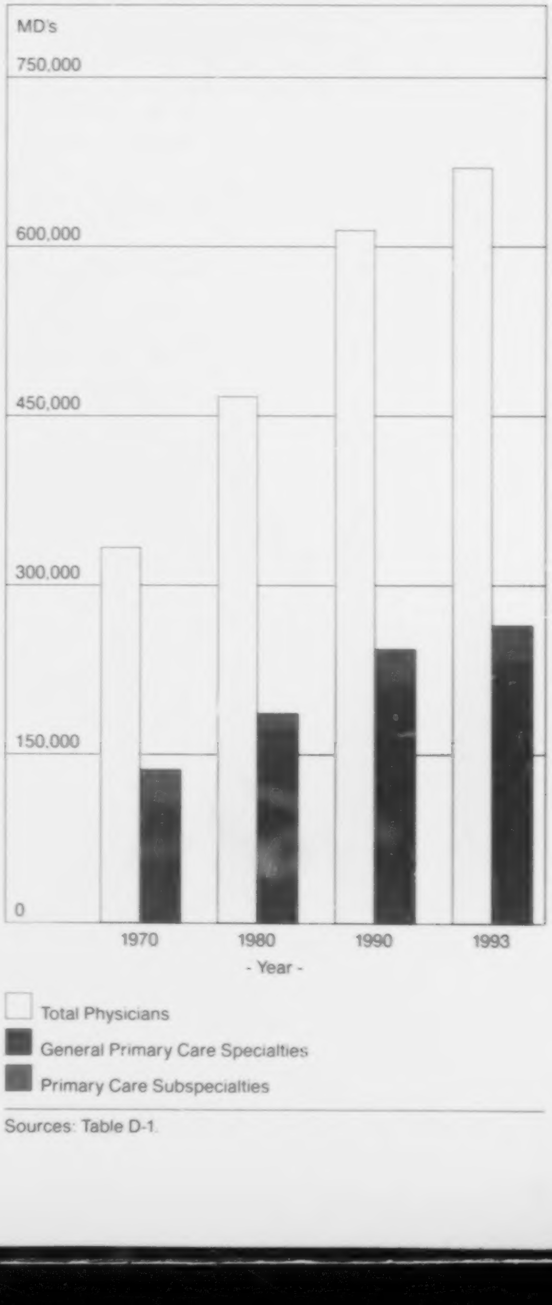
Trends in Primary Care

(Table D-1)

From 1970 to 1993 the total number of physicians doubled, while the percentage of Primary Care physicians increased by 71.5 percent. Meanwhile, in this same period, the proportion in the Primary Care Subspecialties increased almost ten-fold. The largest percentage increase in the Primary Care Specialties was in Pediatrics (127.5%) followed closely by Internal Medicine (115.7%). At the same time, physicians in General Practice decreased 66.7 percent. Among the

Figure 10

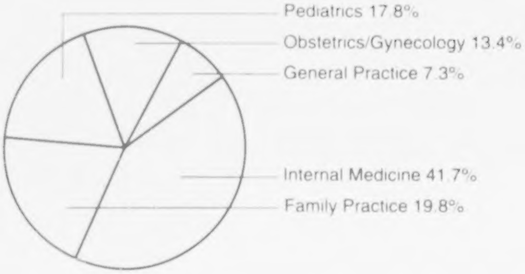
Trends in General Primary Care and Primary Care Subspecialties, 1970-1993



Sources: Table D-1.

Figure 11

Distribution of Primary Care Specialties and Subspecialties January 1, 1993



NOTE: Includes General Primary Care Specialties and Primary Care Subspecialties.

Source: Table D-2

Primary Care Subspecialties, the highest increase (632.9%) was in the Pediatric subspecialties. Figure 10 displays the trends of the total physician population in comparison with the General Primary Care Specialties and the Primary Care Subspecialties.

Of the active physician population, Primary Care physicians comprised 43.2 percent of all physicians in 1970, and 38.0 percent in 1993. The largest component, Internal Medicine, represented 12.8 percent of all active physicians in 1970, and 14.2 percent in 1993. Figure 11 illustrates the percentage of physician practicing in the general Primary Care Specialties and those in the Primary Care Subspecialties.

Activity and Gender

(Table D-2)

Office-based practice included a higher percentage of Primary Care physicians (71.0%) than for the Primary Care Subspecialties (60.3%) with all other subspecialties appearing midway (65.8%). By contrast, research activities included a higher percentage of the subspecialties (11.5%) compared to the Primary Care Specialties (1.0%). These trends were more pronounced for male than for female physicians. Among the Primary Care Specialties, 74.5 percent of the male physicians were in office-based practice; for the subspecialties, 11.9 percent of the male physicians were in research.

However, a larger percentage of female physicians compared to male physicians were in Primary Care (49.7% and 35.3%, respectively). In each of the Primary Care Specialties, except for General Practice, the percentages of female physicians surpassed those of male physicians. This difference was especially apparent for Pediatrics, which represented 14.8 percent of all female physicians, but only 4.8 percent of male physicians.

Age and Gender

(Table D-3)

The largest percentage of active physicians was in the age group 35 to 44 years (32.7%), with the age groups Under 35 and 45 to 54 years having the next largest and similar percentages (22.0% and 21.9%, respectively).

Among Primary Care physicians, the largest percentage (33.0%) was in the age group 35 to 44 years, whereas the next largest group was Under 35 (26.7%). The age group 45 to 54 years included only 18.1 percent of Primary Care physicians.

The tendencies noted for the Primary Care physicians prevailed also for each of the Primary Care Specialties, except for General Practice, in which the largest percentage was found in the group 65 and Over (39.4%); the group 35 to 44 represented only 11.9 percent of the General Practice physicians.

Primary Care accounted for over half (58.3%) of female physicians in the age group Under 35. The comparable percentage for male physicians was 40.6 percent. A similar gender gap existed for the age groups 35 to 44 years and 45 to 54 years. In the older age groups, the gender gap is less because of the relatively small female physician population in these groups. For example, in the age group 65 Years and Over, Primary Care included 39.5 percent of the male physicians and 37.1 percent of the female physicians.

Board Certification and Gender

(Table D-4)

Among all active physicians, 61.3 percent were board certified by an American Specialty Board while 38.7

percent were not board certified. Of the Primary Care physician population, 54.5 percent were board certified; in comparison, the proportions were 82.5 percent for the Primary Care Subspecialties and 64.9 percent for *all other specialties*.

Among the female physicians in Primary Care Specialties, the highest board certification occurred for Family Practice, in which 59.4 percent were certified. The lowest percentage, excluding General Practice, was for female physicians in Internal Medicine (39.9%). Board certification in these same specialties prevailed also for the male physicians, in which the highest percent (72.3%) was in Family Practice and the lowest percent (50.1%) occurred in Internal Medicine.

Primary Care physicians have higher percentages of no board certification than the Primary Care Subspecialties or all other specialties. Of the Primary Care physicians, 45.5 percent were not board certified compared with 17.5 percent for Primary Care Subspecialties and 35.1 percent for all other specialties.

Primary Care Specialties with the highest incidence of no board certification were General Practice (85.3%) and Internal Medicine (52.2%). The high percentage for General Practice occurred since this specialty has no board which grants certification.

School and Year of Graduation

(Tables D-5 and D-6)

Table oo shows the top 10 schools with the largest numbers of total graduates with the number and percent of their graduates practicing in the Primary Care Specialties. Ten schools had fifty percent or more of their graduates practicing in Primary Care: Mercer University (69.3%), Wright State University (56.4%), Morehouse University (55.1%), Marshall University (54.5%), University Central del Caribe (53.0%), East Carolina University (51.6%), University of South Carolina (51.3%), Southern Illinois University (50.7%), University of California at Davis (50.0%), and University of Hawaii (50.0%).

Nearly half (46.0%) of Primary Care physicians and 40.0 percent of all active physicians have graduated since 1980. The next highest percentage, graduates of 1970 to 1979, comprised 24.0 and 26.0 percent, respectively, of Primary Care and active physicians. However, gender differences presented greater dissimilarities. Among Primary Care physicians, 39.0 percent of males and 66.7 percent of females were graduates since 1980. This difference reflects the great increase in numbers of women physicians in recent years. Similarly, for all active physicians, 35.1 percent of male physicians and 60.3 percent of female physicians were graduates in the group 1980 to the present.

Table oo

Top 10 Schools in Number of Graduates and Primary Care Specialists, January 1, 1993

School (Total = 126)	Total Graduates	Graduates Practicing in Primary Care	Percent Primary Care of Total
U of Illinois	11,336	3,893	34.3
U of Minnesota	9,425	3,679	39.0
U of Michigan	9,323	2,378	25.5
Jefferson Med Coll	9,239	2,748	29.7
SUNY (Brooklyn)	8,671	2,455	28.3
Harvard U	8,126	1,815	22.3
Northwestern U	7,976	1,966	24.6
Ohio State U	7,960	2,744	34.5
U of Tennessee	7,954	2,755	34.6
U of Pennsylvania	7,497	1,881	25.1

Among the male, and the female, physicians, the highest percentage of graduates since 1980 occurred in Internal Medicine followed by Family Practice. For the male physicians, the respective percentages were 49.3 and 42.7; for the female physicians, 74.5 and 71.8.

State of Location and Gender

(Tables D-7, D-8 and D-9)

The top 10 states with the largest number and the highest percentage of Primary Care physicians, ranked according to the incidence of each, are shown in Table pp.

Table pp

Top 10 States with Largest Number and Percentage of Primary Care Physicians Compared to Total Physicians in state, January 1, 1993

State	Total Physicians in State	Number of Primary Care Physicians	Percentage of Primary Care Physicians
CA	86,479	28,497	33.0
NY	67,165	23,541	35.0
TX	36,487	12,339	33.8
FL	36,142	10,581	29.3
PA	34,224	11,189	32.7
IL	29,652	11,390	38.4
OH	25,780	8,951	34.7
MA	23,947	7.514	31.4
NJ	22,883	8,372	36.6
MI	20,574	7,265	35.3

Table pp reveals that the states with the largest number of Primary Care physicians tended to rank lower in their percentages of Primary Care physicians to total physicians. Among male physicians in 28 states and DC, Internal Medicine was the Primary Care Specialty having the largest number of physicians. In the remaining 22 states, the number of physicians in Family Practice exceeded that in Internal Medicine. In the

Possessions, General Practice represented the largest number of Primary Care physicians.

Among the female physicians in Primary Care, Internal Medicine was also the specialty having the largest number of Primary Care physicians in 26 states and DC. In the remaining 24 states, Family Practice claimed the largest number of physicians.

Country of Graduation

(Tables D-10, D-11, D-12, and D-13)

Table qq shows that a higher percentage of International Medical Graduates (IMGs), compared to United States Medical Graduates (USMGs) and Canadian Medical Graduates (CMGs), were in the Primary Care Specialties. Among all IMGs, the largest number (25,029) were in Internal Medicine, which represented 43.2 percent of IMGs in Primary Care.

Table qq

Country of Graduation of Active Physicians, January 1, 1993

Country	Total Number	Number in Primary Care	% Primary Care of Total Actives
Total	605,685	230,432	38.0
USMGs	511,972	170,379	33.3
IMGs	139,086	57,873	41.6
CMGs	8,839	2,180	24.7

Almost half (49.7%) of female IMGs were in Primary Care, compared to 39.3 percent of male IMGs. For female IMGs, Pediatrics was the specialty representing the largest number of Primary Care physicians (36.7%), followed by Internal Medicine (34.1%). Among male IMGs in Primary Care, Internal Medicine accounted for the largest number of physicians (46.5%) followed by Family Practice (15.3%).

The age group of highest number of IMG Primary Care physicians was 35 to 44 years, which comprised 31.0 percent of these physicians. Among IMG male Primary Care physicians, this age group represented 29.9 percent of these physicians; for the female IMGs, this age group was 34.0 percent of these physicians.

Graduates of U.S. medical schools (USMGs) have a smaller percentage in Primary Care compared to IMGs (33.3% and 38.7%, respectively). Moreover, USMGs were found in higher proportions in Family/General Practice (11.0%) compared to IMGs (9.6%), who were represented in a higher proportion in Internal Medicine (16.7%) compared to USMGs (11.8%). The states having the highest percentages of USMGs in Primary Care were Alaska (44.4%), Wyoming (42.0%), and South Dakota (41.8%). Lowest percentages were found in Florida (26.2%) and Maryland (30.3%). Among the five specialties comprising Primary Care, Internal Medicine included the highest percentage of USMGs (11.8%). However, in twenty-two states, Family Practice included the highest percentage of USMGs. Among graduates of Canadian medical schools, only 24.7% were in Primary Care, and the highest percentage of these was Family Practice (8.0%).

Metropolitan Areas

(Tables D-14 and D-15)

Table rr shows that over four-fifths (85.8%) of the active physicians are practicing in metropolitan areas and that almost the same proportion (83.2%) represents the Primary Care physicians in these areas. Of all active physicians practicing in metropolitan areas, 36.6 percent were in Primary Care, mostly in Internal Medicine (14.6%). Among the male physicians, 33.5 percent were in Primary Care; for the female physicians, the percentage was 49.0.

Table rr

Physicians Practicing in Metropolitan and Non-Metropolitan Areas, Total and Primary Care Physicians, January 1, 1993

Group	Totals		Metropolitan Areas		Nonmetropolitan Areas	
	Number	Percent	Number	Percent	Number	Percent
Total Active Physicians	605,685	100.0	538,212	88.9	67,473	11.1
Primary Care Physicians	230,432	100.0	191,742	83.2	38,690	16.8

Of the five specialties comprising the Primary Care physicians in metropolitan areas (197,234), Internal Medicine represented the largest proportion (39.8%), followed by Family Practice (20.1%) and Pediatrics (18.7%). Internal Medicine represented 41.8 percent of the male physicians in Primary Care, but only 34.5 percent of the female physicians. While Family Practice was the second highest specialty of male physicians, it was Pediatrics for the female physicians, representing 30.3 percent of these physicians.

Of the 319 metropolitan areas listed in Table D-15, only six recorded over 15,000 nonfederal physicians in practice: New York (38,464), Los Angeles (26,691), Chicago (20,448), Boston (17,955), Philadelphia (17,597), and Washington, D.C. (15,184). The percentage of Primary Care physicians in these metropolitan areas was in the range 30.1 (Boston) to 39.0 (Chicago). While Internal Medicine comprised the Primary Care Specialty having the largest number of physicians in each of these metropolitan areas, the percentage in Internal Medicine of all Primary Care physicians varied from Boston's 58.5 percent to Los Angeles' 36.4 percent.

Table D-1

Federal and Nonfederal Primary Care Specialties for Selected Years 1970-1993 (Number, Percent Distribution, and Percent Change)

SPECIALTY	1970	1975	1980	1985	1990	1992	1993

SEE APPENDIX A-1 FOR A LIST OF ALL METROPOLITAN STATISTICAL AREAS.

Appendix A-1

List of Metropolitan Statistical Areas (MSAs)

MSA County Composition

The 319 Metropolitan Statistical Areas (MSAs) in this publication are comprised of the following counties:

Abilene, TX—Taylor
Akron, OH—Portage, Summit
Albany, GA—Dougherty, Lee
Albany-Schenectady-Troy, NY—Albany, Greene, Montgomery, Rensselaer, Saratoga, Schenectady
Albuquerque, NM—Bernalillo
Alexandria, LA—Rapides
Allentown-Bethlehem, PA —
    New Jersey Portion—Warren
    Pennsylvania Portion—Carbon, Lehigh, Northampton
Altoona, PA—Blair
Amarillo, TX—Potter, Randall
Amarillo, TX—Amarillo
Anaheim-Santa Ana, CA—Orange
Anchorage, AK—Anchorage
Anderson, IN—Madison
Anderson, SC—Anderson
Ann Arbor, MI—Washtenaw
Anniston, AL—Calhoun
Appleton-Oshkosh-Neenah, WI—Calumet, Outagamie, Winnebago
Asheville, NC—Buncombe
Ashland, KY—(See Huntington-Ashland)
Athens, GA—Clarke, Jackson, Madison, Oconee
Atlanta, GA—Barrow, Butts, Cherokee, Clayton, Cobb, Coweta, De Kalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Henry, Newton, Puulding, Rockdale, Spalding, Walton
Atlantic City, NJ—Atlantic, Cape May
Attleboro, MA—(See New Bedford-Fall River-Attleboro)

Appendix A-3
Demographic County Classifications

Demographic County Classification		**Number of MSAs**	**Number of Counties***
Total 50 States and D.C.		322	3,152
9	Counties in MSAs with 5,000,000 or more inhabitants	3	12
8	Counties in MSAs with 1,000,000 to 4,999,999 inhabitants	43	214
7	Counties in MSAs with 500,000 to 999,999 inhabitants	51	166
6	Counties in MSAs with 50,000 to 499,999 inhabitants	225	353
4	Non-metropolitan counties with over 50,000 inhabitants		266
3	Non-metropolitan counties with 25,000 to 49,999 inhabitants		526
2	Non-metropolitan counties with 10,000 to 24,999 inhabitants		892
1	Non-metropolitan counties with under 9,999 inhabitants		713
0	Possessions		9**

*For a description of Demographic County Classifications (DCCs) and Metropolitan Statistical Areas (MSAs), refer to the Reference Material and Definition Section of this publication. Excluded from the above are the following: Virgin Islands, Pacific Islands and APO/FPOs. Independent cities in Virginia and boroughs and census areas in Alaska are included in "Number of Counties" column.

Appendix A-4
List of States and Abbreviations

State	Abbreviation	State	Abbreviation
Alabama	AL	New Jersey	NJ
Alaska	AK	New Mexico	NM
Arizona	AZ	New York	NY
Arkansas	AR	North Carolina	NC
California	CA	North Dakota	ND

Appendix B-1
Specialty Abbreviations*

Family/General Practice

FP	Family Practice
GP	General Practice

Medical Specialties

AI	Allergy and Immunology
CD	Cardiovascular Diseases
D	Dermatology
GE	Gastroenterology
IM	Internal Medicine
PD	Pediatrics
PDC	Pediatric Cardiology
PUD	Pulmonary Diseases

Surgical Specialties

CRS	Colon and Rectal Surgery
GS	General Surgery
NS	Neurological Surgery
OBG	Obstetrics and Gynecology
OPH	Ophthalmology
ORS	Orthopedic Surgery
OTO	Otolaryngology
PS	Plastic Surgery
TS	Thoracic Surgery
U	Urological Surgery

Other Specialties

AM	Aerospace Medicine
AN	Anesthesiology
CHP	Child Psychiatry
DR	Diagnostic Radiology
EM	Emergency Medicine
FOP	Forensic Pathology
GPM	General Preventive Medicine
N	Neurology
NM	Nuclear Medicine
OM	Occupational Medicine
P	Psychiatry
PH	Public Health
PM	Physical Medicine and Rehabilitation
PTH	Pathology, Anatomic/Clinical
R	Radiology
RO	Radiation Oncology
OS	Other Specialty
US	Unspecified

---

*Above codes apply to Detail Tables 1-14. Appendix B-2 contains complete listing of Self-Designated Practice Specialties.

Appendix B-2
List of 132 Self-Designated Practice Specialty Codes*

AI		Allergy & Immunology—Includes:
	A	Allergy
	AI	Allergy & Immunology
	ALI	Allergy & Immunology/ Diagnostic Lab. Immunology
	IG	Immunology
AM		Aerospace Medicine
AN		Anesthesiology—Includes:
	AN	Anesthesiology
	APM	Pain Management (Anesthesiology)
	CCA	Critical Care Anesthesiology
CD		Cardiovascular Diseases
CHP		Child and Adolescent Psychiatry
CRS		Colon and Rectal Surgery
D		Dermatology—Includes:
	D	Dermatology
	DDL	Dermatological Immunology/ Diagnostic Lab. Immunology
DR		Diagnostic Radiology
EM		Emergency Medicine—Includes:
	EM	Emergency Medicine
	ESM	Sports Medicine (Emergency Medicine)
FOP		Forensic Pathology
FP		Family Practice—Includes:
	FP	Family Practice
	FPG	Geriatric Medicine (Family Practice)
	FSM	Sports Medicine (Family Practice)
GE		Gastroenterology
GP		General Practice
GPM		General Preventive Medicine—Includes:
	GPM	General Preventive Medicine
	UM	Undersea Medicine
GS		General Surgery—Includes:
	AS	Abdominal Surgery
	CCS	Critical Care Surgery
	CDS	Cardiovascular Surgery
	GS	General Surgery
	HNS	Head & Neck Surgery
	HSS	Hand Surgery (Surgery)
	PDS	Pediatric Surgery (Surgery)
	TRS	Traumatic Surgery
	VS	Vascular Surgery
IM		Internal Medicine—Includes:
	DIA	Diabetes
	END	Endocrinology & Metabolism
	HEM	Hematology
	HEP	Hepatology
	ICE	Cardiac Electrophysiology
	ID	Infectious Diseases
	ILI	Diagnostic Laboratory Immunology (Internal Medicine)
IM		Internal Medicine—Includes: (Continued)
	IM	Internal Medicine
	IMG	Geriatric Medicine (Internal Medicine)
	ISM	Sports Medicine (Internal Medicine)
	NEP	Nephrology
	NTR	Nutrition
	ON	Medical Oncology
	RHU	Rheumatology
MG		Medical Genetics—Includes:
	CBG	Clinical Biochemical Genetics
	CCG	Clinical Cytogenetics
	CG	Clinical Genetics
	CMG	Clinical Molecular Genetics
	MG	Medical Genetics
N		Neurology—Includes:
	CHN	Child Neurology
	CN	Clinical Neurophysiology
	N	Neurology
NM		Nuclear Medicine
NS		Neurological Surgery—Includes:
	NCC	Critical Care (Neurological Surgery)
	NS	Neurological Surgery
	NSP	Pediatric Surgery (Neurology)
OBG		Obstetrics & Gynecology—Includes:
	GO	Gynecological Oncology
	GYN	Gynecology
	MFM	Maternal & Fetal Medicine
	OBG	Obstetrics & Gynecology
	OBS	Obstetrics
	OCC	Critical Care Medicine (Obstetrics & Gynecology)
	REN	Reproductive Endocrinology
OM		Occupational Medicine
OPH		Ophthalmology
ORS		Orthopedic Surgery—Includes
	HSO	Hand Surgery (Orthopedic Surgery)
	OAR	Adult Reconstructive Orthopedics
	OMO	Musculoskeletal Oncology
	OP	Pediatric Orthopedics
	ORS	Orthopedic Surgery
	OSM	Sports Medicine (Orthopedic Surgery)
	OSS	Orthopedic Surgery of the Spine
	OTR	Orthopedic Trauma

*Above listing gives the conversion of the 132 Self-Designated Practice Specialty Codes (as listed on the PPA questionnaire and on the AMA Physician Masterfile) into the 38 Specialty Codes used for statistical purposes by the Association. See Appendix D for explanation of Self-Designated Practice Specialty Codes (SDPS).

Appendix B-3
Major Professional Activity Classifications

Office Based Practice	Includes physicians engaged in seeing patients. Physicians may be in solo practice, in group practice, two-physician practice, or other patient care employment. Also includes physicians in patient services such as those provided by pathologists and radiologists.
Hospital Based Practice	Includes physicians in nongovernment or government hospitals.
Residents—All Years	Includes any physician in supervised practice of medicine among patients in a hospital or in its out-patient department with continued instruction in the science and art of medicine by the staff of the facility. Also includes any physician in advanced training in the clinical divisions of medicine, surgery, and other specialty fields preparing for practice in a given specialty.
Clinical Fellows	Includes physicians in an educational training program distinct from an accredited residency program. Clinical fellows are engaged primarily in patient care.
Medical Teaching	Includes physicians with teaching appointments in medical schools, hospitals, nursing schools, or other institutions of higher learning.
Medical Research	Includes physicians in activities (whether funded or unfunded) performed to develop new medical knowledge, potentially leading to publication. Also includes physicians in research fellowship programs distinct from an accredited residency program and primarily engaged in nonpatient care.
Administration	Includes physicians in administrative activities in a hospital, health facility, health agency, clinic, group or any other organization.
Other Activity	Includes physicians employed by insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.
Inactive	Includes physicians who are retired, semiretired, permanently disabled, temporarily not in practice, or not active for other reasons and indicated they worked twenty hours or less per week.
Not Classified	Includes physicians who did not provide information on their type of practice or their present employment.

INSTRUCTIONS:

1. Please answer every question on **BOTH** sides of the survey on the basis of your current activities.
2. **PREFERRED PROFESSIONAL MAILING ADDRESS:** Please check your mailing address (i.e., the address at which you wish to receive medically related materials) printed in the upper right corner of this form. PRINT corrections in the space provided below the mailing address.
3. **HOURS CHANGES:** If the computer-printed HOURS which you previously provided have changed, PRINT the correct numbers inside the BOXES to the right. If HOURS are correct, leave the "Changes if Any" boxes blank.
4. Use a **BLACK** pen ONLY. Do not use pencils or felt tip pens. Print your numbers like the example numbers below for best results. ONE DIGIT ONLY PER HANDPRINT BOX.

I. PROFESSIONAL MAILING ADDRESSES

1. PRIMARY OFFICE ADDRESS
PLEASE VERIFY THAT THE ADDRESS BELOW IS YOUR PRIMARY OFFICE ADDRESS, IF DIFFERENT THAN AT RIGHT

2. PREFERRED PROFESSIONAL MAILING ADDRESS

PLEASE ENTER ANY CORRECTIONS BELOW

IS THE ABOVE ADDRESS YOUR HOME ADDRESS?
PLEASE ENTER ANY ADDRESS CORRECTIONS BELOW

202

[illegible] PROFESSIONAL ACTIVITIES

How many hours per week do you typically spend in each of the following professional activities? If you do not spend any hours in a particular activity, indicate this by entering zero (0) hours in the appropriate space.

HOURS PER WEEK

Prior Census / Changes If Any

6. CURRENT POST-GRADUATE training program as a resident or fellow ☐

If you are CURRENTLY ENROLLED in a post graduate training program, how many years have you spent in post graduate training, including this year? Years

ARE YOU CURRENTLY A:

RESIDENT?

CLINICAL FELLOW? (primarily patient care)

RESEARCH FELLOW? (primarily non-patient care)

A FELLOWSHIP is an educational or research training program DISTINCT FROM an ACGME accredited residency program.

[illegible]

7. PRACTICE INVOLVING DIRECT CARE OF PATIENTS ☐

Direct care means seeing patients. It also includes patient services by such physicians as pathologists and radiologists. **EXCLUDE** time spent on call and in training, teaching, or research. **INCLUDE** time spent on record keeping, other office work, and travel time connected with your patients.

8. ADMINISTRATIVE ACTIVITIES, as a Salaried Staff Member or Executive of an Organization ☐

EXCLUDE time spent in direct patient care, and on record keeping and office work connected with the management of your own practice. **INCLUDE** activities connected with the administration or staff committees of a hospital, other health facility, agency, clinic, group, or any other organization by which you may be salaried as an executive or administrative staff member.

9. MEDICAL EDUCATION ☐

INCLUDE hours you spend in medical teaching or training (both didactic teaching and grand rounds) as well as hours spent preparing for subjects you teach or provide training for in medical, nursing, or other hospital schools, hospitals, colleges, universities, or any other educational institutions.

10. MEDICAL RESEARCH ☐

INCLUDE activities (whether funded or unfunded) performed either to develop new medical knowledge, potentially leading to publication, or to support drug or device approval.

11. OTHER MEDICAL ACTIVITIES (not listed above) ☐

EXCLUDE time involving direct care of patients. **INCLUDE** activities such as Institutional Review Boards, Audit Committees, credentialing, community service, lectures and voluntary activities.

12 TOTAL HOURS YOU WORK IN A WEEK (Total of questions 6-11) ☐

[illegible]

13. ARE YOU:

Retired

Semi-retired

Permanently disabled

Temporarily not in practice

Other

V. PRESENT EMPLOYMENT

How many hours per week do you typically work for each of the following employers/employment arrangements? NOTE: An employer is the entity that PAYS you and should NOT be confused with where you work, e.g., your employer could be a group practice even if you work in a hospital.

HOURS PER WEEK

Prior Census / Changes If Any

14. SELF-EMPLOYED SOLO PRACTICE ☐

15. TWO PHYSICIAN PRACTICE ☐

Are you a Full or Part Owner? YES NO

16. GROUP PRACTICE is the provision of health care services by three or more physicians who are formally organized as a legal entity in which business and clinical facilities, records and personnel are shared. Income from medical services provided by the group are treated as receipts of the group and distributed according to some prearranged plan. ☐

Are you a Full or Part Owner? YES NO

GROUP NAME AND ADDRESS

Are you still affiliated with the above group? Yes No

PLEASE ENTER ANY CORRECTIONS OR ADDITIONS BELOW

GROUP NAME

STREET ADDRESS

CITY STATE ZIP

17. MEDICAL SCHOOL (or parent university) ☐

18. NON-GOVERNMENT HOSPITAL ☐

19. CITY/COUNTY/STATE GOVERNMENT

a) Hospital ☐

b) Other than hospital ☐

20. U.S. GOVERNMENT

a) Hospital ☐

b) Other than hospital ☐

INDICATE FEDERAL AGENCY

ARMY NAVY AIR FORCE PUBLIC HEALTH SERVICE

VETERANS ADMINISTRATION OTHER

21. OTHER PATIENT CARE EMPLOYMENT ☐

22. OTHER NON-PATIENT CARE EMPLOYMENT ☐

(all types of insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.)

23 TOTAL HOURS YOU ARE PAID FOR IN A WEEK (Total of questions 14-22) ☐

Thank you for your cooperation!

American Medical Association

Physicians dedicated to the health of America

Appendix D
Self-Designated Practice Specialty Codes on the AMA Physician Masterfile

Self-designated practice specialties (SDPS) listed on the AMA Physician Masterfile and in this publication, *do not imply "recognition" or "endorsement" of any field of medical practice by the American Medical Association (AMA).* The listing of codes for self-designation of practice specialties (Appendix B-2) was developed to meet AMA's record keeping needs and to assist physicians in describing their primary, secondary, and tertiary fields of specialty practice.

The AMA Division of Survey and Data Resources manages the Masterfile and records a physician's SDPS based on the physician response to the Physicians' Professional Activities Questionnaire (PPA Census). The full list of *Masterfile SDPS* codes is preprinted on the questionnaire and physicians indicate the average number of hours spent during a typical week in those specialties to which they limit their practice. The SDPS with the greatest number of hours becomes the primary SDPS, the SDPS with the next greatest number of hours becomes the secondary SDPS, and so on. The SDPS data described above are used as the source in preparing statistics on the specialty distribution of physicians in this volume.

In addition to maintaining the physicians' primary, secondary and tertiary SDPS on the AMA Physician Masterfile, the AMA collects primary board certification through the American Board of Medical Specialties (ABMS). *American Specialty Board Certification (Appendix B-4)* indicates that a physician has received preparation in accordance with established educational standards of one or more of the 24 member boards of the American Board of Medical Specialties (ABMS). Although the attainment of certification demonstrates proficiency within a chosen discipline, "The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioners of medicine."* Board certification represents a voluntary effort on the part of the physician. The licensed physician may practice any specialty regardless of board certification status. Therefore, both self-designated practice specialty (SDPS), and board certification are appropriate descriptions of different aspects of a physician's practice and are included in this Edition.

Neither SDPS nor certification by a member board of ABMS should be confused with the fact that a physician has successfully completed a program (or programs) of accredited graduate medical education. Accreditation is the process whereby the Accreditation Council for Graduate Medical Education (ACGME) grants public recognition to a specialized program which meets certain established educational standards as determined through initial and subsequent periodic evaluation by one of the 24 Residency Review committees. AMA collects physicians' residency training data through an annual census of all ACGME accredited residency training programs. These data along with SDPS and certification by a member board of ABM are included in this Edition.
